Mr. Geo. E. Engelmann,

Dear Sir:

In all my botanizing
this season I have never in vain, nor
acquired for less than a year ago, and
though with a few half dozen exceptions,
aside the species for which you inquire.
I have collected since for which I
suppose to send to Germany, I have not
I am sorry to inform you, found
any thing to send you. Dr. Hooker's
glaciers I have with our small
strong mountain one of our friends
and suggested a friend it as you say
fruit and another high mountain near
the same place, not suitable
for all kinds of. Probably
flour on the western slope of the same

With nearly identical to those of the latter
described by the British or American geologists
from this species, the same I find I
shall be able to ^{find} the intermediate group of
the State, even with many the same in
habitation and some fossils, but also differs
markedly, which you mentioned with difficult
and impossible.

Brachygonia brachygonia also occurs in
some of the fossil in Germany, France, very
possibly the British species occur
in the same localities. Brachygonia brachygonia
occurs. Brachygonia was long ago noted in the
vicinity of Worcester Massachusetts; but much
as I have desired to see it, my opportunity
has been so far from me I have not
seen it.

Brachygonia brachygonia is common in
the region. I could not have found
a brachygonia brachygonia brachygonia
specimen until the late 18th century.
I have just passed on for a year.

Brachygonia, and brachygonia brachygonia,
are brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.

Picking up might prove to be a brachygonia
from the up for you take the brachygonia
the brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.

I have also noted the brachygonia brachygonia
brachygonia, brachygonia brachygonia brachygonia.
brachygonia brachygonia brachygonia.

Being I may get into the brachygonia
the brachygonia brachygonia brachygonia.
The brachygonia brachygonia brachygonia.

[illegible][illegible]

I have described all the trees except
 the yellow birch. The yellow birch
 is common in the low woods on
 the edge of the swampy woods, and
 is very common in the swampy woods,
 where it may be easily distinguished
 from the white birch by its bark
 which is smooth and white, and
 the leaves of the yellow birch are

My dear friend,
I have been thinking of you
very much lately, and I am
glad to hear from you.

I am well, and hope you
are the same. I have been
very busy lately, but I
will try to write to you
more often. I am
glad to hear from you.

I am well, and hope you
are the same. I have been
very busy lately, but I
will try to write to you
more often. I am
glad to hear from you.

Yours truly,
L. G. Pringle.

I have been thinking much lately
of the things which are
done in the world, and
how much of it is
done in the name of
the Lord, and how much
is done in the name of
the devil. I have been
thinking of the things
which are done in the
name of the Lord, and
how much of it is
done in the name of
the devil. I have been
thinking of the things
which are done in the
name of the Lord, and
how much of it is
done in the name of
the devil.

I have been thinking of the things
which are done in the
name of the Lord, and
how much of it is
done in the name of
the devil. I have been
thinking of the things
which are done in the
name of the Lord, and
how much of it is
done in the name of
the devil. I have been
thinking of the things
which are done in the
name of the Lord, and
how much of it is
done in the name of
the devil.

done in the name of
the devil.

After the first session of
your institution, which I
had never actually seen, you
have it well conducted in accordance
with the letter of P. S. 1840. The
regulate rules I had expected
to find, but also with some
lines of grace in the regulations in a
manner which I have nowhere
observed before. The board of
managers, consisting of the major, who I
see, is a great advantage. I think a regular
one, especially at such a school, is
valuable. Some members of the
board, who, I think, should not be
absent, and one or two of the board
of the women. There is a committee
of the ladies, of whom I have
heard much.

I am glad to hear of your success in
 the study of the French language. I hope
 you will continue to improve and
 will be able to converse with confidence.
 I am, dear friend, ever your
 affectionate friend,
 J. B.

is botanical treasures on wild woods
and mountain tops? To me half the
pleasure of that solitary life consists
in making the acquaintance of these
their native haunts and their learning
from them their curious preferences, - the
insects, the ferns, and special
associates they choose. Among all the
things which my chosen occupations yield
I think I know of none quite so delightful
as those which a day in the deep
mossy woods, by the ^{shady} margin of some
blue lake, or on the wild, lone rocks
of some mountain summit, afford in the
study of nature.

As respect the flora of British America, which I hope to have long enough to explore, the work of Hooker, Thunberg, Bernard, Donnell, is something admirable & steady. I presume it is probable in the market. I am about to give correspondence with some American collectors, & some

Yours truly,

L. G. Pringle.

Charlotte, Tenn.

January, 19th, 1872.

Wm. Geo. E. Davenport

My dear Friend:

The Liberal manner in which you share with me your choicest must have led me almost as much as it gratifies me, but I cannot ~~overstep~~ ^{overstep} and go ~~on~~ ^{on} should again distrust, ~~then~~ ^{then} the value of the specimens ~~dedicated~~ ^{dedicated} to you were ~~invaluable~~ ^{invaluable}, in order that you may furnish me with even so rare acquisitions.

I thank you for the frequent favors which prove on mine constantly increasing obligations to you; and reiterate your kind New Year wishes. I hope the pleasure you have shown so much enthusiasm in placing in Massachusetts Ave., will not fail to gladden you many times during the coming season. I expect the next

we will prove a very busy one to me,
and much depends upon its being so
successful or also. But for my usual cares
& hard labors, I have to grow a large
quantity of potatoes of a new variety of my
own originating, a cross between the Golden
and the Early Rose, which the nobles, Bishops
of New York are about to introduce to
the public. I have in prospect the
change of the Horticultural department
of our University of Vermont and State
Agricultural Landings, and the formation
of horticultural experimental grounds
and something of a botanic garden, and
if this enterprise but bring our the primary
recompense, which it now promises to do,
I shall have the much needed means
for preparing myself for these duties.

I mean to apply myself with still
greater diligence to my botanical studies,
and I am glad to receive the list of
plants which you desire. Your request for

plants in America are an entire indication
of botanical taste in our country and a
renewal, which perhaps I may reach.

A few days ago I sent you by mail
the boxes of plants which I was able to
gather during a tour. Of some of the
specimens about you list, I will be
able, I think to send you shortly a fine
specimen, even as the most of them
are common plants here, it will
require, I presume, more than an hour
foraging to discharge your entire commission.
I am not in a moment expecting more,
that it will be anything but a pleasure
to me to do this to you, as I shall
be able.

Aplastrum Cognatum I have not yet met
with, but I doubt whether it is so rare
as long to escape my notice.

Will it be repaying for an impossible
thing, if I permit myself to anticipate sharing
with you some day the delight of examining

Boston, 24th

March, 8th, 1874.

My dear Mr. Brewster,

I really begin to think
you will yet make a botanist of me.
Certainly, if I ever attain to any place
among botanists, however modest it may
be, I shall be compelled to accord to
your assistance and encouragement much
of the credit. I do not expect you will
understand this, as I realize it. Such kind
criticisms as you make are well possessed of
peculiar value, and seem to me wonderfully
effective. I hope I may be able to make
you better returns than I am now able to do.

I am under obligations to you of which
you are not aware. Let me tell you how
you have forgotten back home a very
nice little bird. The incident is a little
singular; but more pleasing to me than strange.
I only years ago, when I a school-boy and

[illegible]

P.S. I am writing this on
 board of the steamer as well as the message
 of Mrs. Wadsworth. Surely I
 ought to take great pains to make them
 so satisfactory. I begin to feel
 that I could not help you with your
 journey, were I to become a Chaplain
 as the French say or a Wandering Jew.

I return the ^{enclosed} ~~last~~ Transaction of your
City, from Mr. Bidwell. - Thank you for
your thoughtful.

The Catalogue and Notes in
 which you so kindly remembered me.
 I was, particularly, pleased to receive.
 I thank you very much.

Among my few "found" ones, where I came to connect them is none, which is like anything I have; and I can hardly make out what they are. I do not remember where I gathered them.

to not visit in winter etc. For a
some time to me, immediately re-
solved into this part of Vermont. I am
giving you the greatest pleasure by the
the object of his visit in this State, and
if it is possible in me to lay aside my
other business, I will be more than
willing to conduct him to the places
concerned which are of most interest to
a Botanist, as to the ascertained relations,
and any particular plants in any wilds
to give. I am glad to hear of a visit
to Vermont; I believe he will find that we
have many places not in Oakes' Catalogue,
and in Mr. Frost's supplement. I have regret
to do something in the same way the coming summer
I would go into the wilds of the N. E. part
of the State. That region is a new one.

I am under the necessity of asking my friends
to give me notice, when they can visit me, as I
live four miles from the Charlotte C. R. Station,
and would not like to be so long a wait
for a train. I find I can send you a few of
the ^{new} year cards, and
Yours sincerely,
C. C. Pringle.

and when we reached
rocks are covered with plants
Sagittaria and large white flowers
and small flowers, and
and coral cedar stumps and the
beehive; to which, indeed, with some
and to some other plants
to our sandy, pine woods; and the woods
where we have seen the birds; to the
calcareous cliffs of the Hinovskii for Pines
and Abies, and other plants; and to our
side, here we see the tops of the subalpine
plants which find their congenial
home. As it is planned to explore
the cold region in N. E. W., I should
have been able to go with him as
far as N. E. W. side.

Your interest in flowering ^{for} *Tridacna*,
etc. I think is very reasonable. Before
receiving your request for the plant
of *T. tridacna*, I had been receiving
from the W. side, for exhibition

Charlotte, Vermont.
June 29, 1871.

Dear Mr. Dana,

Large a great
mass of snow is in the great area
there a lot of snow has fallen,
which has been very much
watered. The vegetation
in which you and I have so
much delight is springing up
once again into active life; the
grass has already shown the
field a fringe of green; and the
other day I found in the woods
a few *Hyssopus* nearly open.

And I have already taken
my share of the joys which the
spring season offers; in fact
and I spent several days in
the field collecting a barrel of

and I am sure you will
be of the opinion that the
new discovery is a
valuable one. It was not until I
was very successful since I
found some at the same
mountain range, with the exception
that the former was not
found in Europe?

As I have been very much
interested in the same
in the last of the month, I
gathered it up at the same
time as the rest of the
which I needed to day ago. I will
be sure to say up an address
of my desire to remember you
this summer in my returning
when I come to the West. I will
be sure to be at the time
when you are at the time
before a light day night

and I am sure you will

out of bloom. I send a specimen, to see if

it is not dissecta pub.

It is not dissecta pub. — affords me great
delight in Bristol, Pa., a very common plant,
grows under the same conditions, surrounded by a bog
— beds of moss in extent. Its carpet of
sphenocarpium is gay with Arctostaphylos, Salix.

chilensis, and Pyrola aphiophylla.

There rise two or three feet in height the white

— of the Habenaria debilis.

I found these here, by the way, Lithospermum,
and a most beautiful pink Pyrola, the reticulata
— habitu.

I have already found a large part
of the plants in the list you sent me. Some
of them I can only get for you, as they occur
in the extreme southern part of the State, as
in Towson, where the flora corresponds with
that of Western Mass., as in Bartholomew, etc.

Your selfless kindness, and desire to make
my effort to help you. Your best was well
with the appreciation.

Charlotte, Tenn.

July, 27th, 1874.

My dear Mr. Sampson:

You were quite right
in claiming that it would be a dis-
grace not to me to fail of the privilege
of botanizing with Mr. Faxon. I had
expected ~~to~~ much pleasure and profit
from my visit to Tenn., and can only
console myself with the hope and
belief that the future will yet yield

me the opportunities for botanizing and
for making profitable acquaintance, which
I have so long desired. I had pre-

I could best place the attractions
of our valley under contribution to the
science and advantage of the South,
and need have hesitated at the result.
But in my various labors, I will

still hope to show you my favorite
plants and the reasons they contain,
if not this season, then next.

I desire most fully not to mean,
it is that I may get entrance yourself
and any of your friends whom you may
send or bring with you. If you are an
object with you, the inexpressible wealth
of mountains with Juniper and in
your command. Not getting on, expecting a
mile within a mile of home, I found
as well as an acre of Agave angustifolia;
and still Agave Guthrieana in great

say nothing of the most magnificent
first plants of Sancti-petri Sancti-petri
Sancti-petri, Sancti-petri, Sancti-petri,
that I particularly wish you could bring
with me in Sancti-petri, the
south of us. Unlike our own township where
rich, warm ridges and broad meadows abound
of excellent farms, Sancti-petri is a cold
region much broken up by rocky hills

to large boulders and granite blocks of
old sandstone. Between the hills in the bottom
of the valleys are many cedar swamps of various

The region is rich in Sancti-petri. Sancti-petri
the stunted pines in the sand-soil which covers
the old rocks of its hills is Sancti-petri
Sancti-petri, and in the swamps Sancti-petri, Sancti-petri,
and Sancti-petri are very abundant. Sancti-petri
then Sancti-petri I have found a form which
correlates with the description of Sancti-petri
in every particular, and not in the rest
in the dense shade of the cedars which
Van Houtte represents accurately in Flora des
Barres, Vol. X, p. 207. The lower form of the plant
in the upper one is a Sancti-petri Sancti-petri
in shape of Sancti-petri. You can see it in your
library. Van Houtte calls it Sancti-petri var.
The lower form is in the Sancti-petri
which I have indicated at 8 or 10 inches in height;
it is very Sancti-petri, and Sancti-petri.

In our garden in Sancti-petri I find
the plants the other day which have

I should like to send you
a little tin through the post in
the north-eastern part of this State.
It is a good one and is a good one.
Tell me what are the results of the
survey. Does it have any value?

That region abounds in cold
and dry, I understand; and its
climate is very dry. It is a
little.

On the farm the season is thus far a
prosperous one. Heavily rain is a
great blessing. Haying will carry over
in part; some of the best, and the en-
joyment of fruit, while the
rest of winter.

Hoping I have by all this writing in-
spired in you a desire to come this very winter
your part of the

I remain faithfully yours,
C. G. Phipps.

Charlotte, 18th, 1844.

August 13th, 1844.

My dear Mr. Garrison.

The package of Canadian furs which you were so thoughtful and so kind as to send me a few days ago was just what I had been wishing to get for my little fur skin. I cannot think of anything which would have been so valuable. I shall I will say this to you I would not send it back. The Canadian furs, as I wish that of all, were in the hands of you, so you have a little of it in that line. I am sure.

I shall for you a few pounds in various shapes of the same of a mixture of Asian and European skins. I have common fur and some ground it. I shall, and others, as you wish.

I have, I suppose, no objection to
the use of the term "the
8th day". I have not yet had
any other kind of ground - the idea which
seems to be possible; and in other instances
it suggests that form.

I write it to you and mine. I
am of course a very old man,
if you make it out to be different
from the common 2.5 inch, and
the same.

Yours truly,

L. L. Thayer.

an account of the abandoned town. These
first words are especially; and the
is a rain. Specting the way in which
the land was occupied it were introduced
like our own. It was often
come up after me, when I have found a
spot peculiarly fitted for certain plants, and
no matter how limited the spot, I
looked in vain for those plants, growing
very far from it, it may be, from any other
species. How the right plants and the
right locations for them were brought together is, at
you must, an interesting subject for enquiry; and
is explained by attributing great efficiency
to the wind, and suggests the use of
such an infinite number of seeds as most plants
enjoyed with. Scarcely any subject connected with
botany is of deeper interest to me than the habits and
preferences of plants as respects the soil and other
conditions in which they grow.

Allow me to remain

Your sincere friend,
C. L. Pringle.

Charlotte, Vermont.

August, 14th, 874.

Dear Mr.avenport:

It is a very quiet, quiet, country road, where
a few city people find their way
to spend a few weeks at this season
of the year. One of them is on the shore of
the Lake at the west end of the town
(the opposite end from me) and the other
is situated among a range of hills in
the center of the town. We are
in Charlotte; and, though there is a great
little village in the town, none of them is of
sufficient size to admit of its being called
a village. The scenery of the vicinity is
undisputed in the State. I think Mr. Fox
would find stopping in Charlotte a while
a pleasant thing. And as for botanizing in

Charlotte, N.C.

Aug. 29th, 1874.

My dear Mr. Sargent.

I have been detained
at home a week longer than I expected
to be when I wrote you last, and only
just for the north today. I mean a letter
from all find Mr. Faxon there;
either if we cannot find Charlotte, next week
I shall hardly fail to meet him; as
shall doubtless return home by the middle
of the week.

My dear old Swamp of which I am
given you a description, will be in dance
another time, Hydrum simplex.

The case I shall not fail to fulfil
as, as possible the request of you to come
I am to much. Yours truly

C. C. Pinger.

I enclose photograph of my old Swamp

✓ - all were a ^{few} small very dark silvers.

When I descended my mind was too
bored for action. The wind was very high that
day, and was undoubtedly rising over
parts of the cliff. (I saw large pieces of
ice that had cut recently falling.) So I
felt quite unsafe; and, when I had exhausted
myself in my hurried and laborious search,
I descended to the lake for dinner and a
little rest before going on the summit. Not
far from where I found the Proctoria I found
a colony of Ptilopus gravis.

The larger specimens of H. globula I have pressed; and of the small ones I have put one into my fire garden and send you the other tied up in the exterior of a roll of ~~wood, etc.~~, from a ~~Swamp~~ on the Point of Lake Wampanoag, N. Y. amongst which you may possibly find something acceptable. In the same pkg I have put a tuft of Equisetum serotinum picked up for you in a wood in

Charlotte Verneville.

Sept., 8th, 1874.

My dear Friend:

I dropped you a few
lines in the morning of my leaving
for the north part of the State, and
now can do no less than repeat to
you concerning my visit to Hillsburgh
the enclosed, &c.

I could have so long since been from
going, and so many cares about me required
any attention, that I allowed myself
but four or five days for my trip. Now
the greater part of that time business
and friendship claimed, so that I had
not one day to spend in visiting
Middlebury Mountain. Thirty or forty miles
ride by road and carriage being
returning left me but four or five hours

Millingtonia alba is a magnificent - scarce as you approximate it here in
South, that has water lying deep within a shallow chert in the mountain -
when it is with the dry ground. I found water to be collected by 0 feet, then some
- in of the year, and ground several days waiting myself further into the
and it was almost a - covering of the dry with beautiful through the
that is coming, and a - River when it is - I should regret the part of my
prospects after this season. Why I want to go there as long as the mountain is not going
[then next year? The place is entirely deserted at present - it is - , probably there
the hills with the general next summer.

One of the specimens of H. latifolia which I am - finding is assigned for you.

Yours faithfully,
C. C. B. P.

for the mountain, where almost four
a fine range - required to make a
through range. Half of my allotted time
I devoted to the principal and the mountain
quarters - is base, and the other half
I wasted in visiting the summit of the
mountain, where I found nothing to repay
my effort. The foot of the principal half
a - is above this - there was a
most - interesting place to me, and I brought
away a good number of plants - I had never
met before - Some plants were of course
out of season. Lotus Halimii was common
and pretty. Scirpus discolor I was so fortunate
as to find still in flower in one instance. But
you are perhaps impatient to know whether
I found Woodia glabra. I did find four
plants of it (two mature and two small ones)
at the - with climbing over the ^{face} side of the
cliff and peering into its obscure nooks. And
I not been - by the supposition that I
should find enough of it on the summit

I have done little of the
kind since I have returned home,
and I am not yet reconciled
to giving up my journey south. I have
been hardly able to find you in a
little while and actually at the top
of the mountain and when all are in, to
obtain a number of which I have
sent you half of those in your
box.

I am so glad you are staying
until it is too late there is a
possibility of my seeing you
when you are in the country this
and in this
region, next summer. We can at least
keep that mark in view.

Yours faithfully,
C. C. Pringle.

Charlotte, Vermont.

Sept. 20th, 1854.

Dear Mr. Savin:

Indeed I am sorry to
be disappointed of seeing some of my
friends. Even in Vermont this season,
but in this I am cheered by the hope
that the future will make good
amends for the disappointments of the
present and perhaps the future will
never again another year: our plants
will display themselves then as well as
as they are looking down. Very few will
be missed from their places. And then,
I trust, you and your friends will
find just as much to do among
them, as you would have done had
you been able to ramble among them
this year.

In the numerous pictures that
you have sent me since I wrote you last.
Parnassia leveliniana is very common
and is being collected by many
English amateurs. I
have been growing it since I came to the
garden some 17 years ago. It is
very common in the mountains of the
Sierra, and also in the
on the Winoski River, where I go for
Pellaea atropurpurea.

I have found the "Drill" fern (now
in Baker's Catalogue) and have
got for you a little of *Pellaea gracilis*, roots
and pressed plants. I believe it is very rare
in the State.

Shortly after I wrote you last I found
Aspid. cristatum, var. *Clintonianum*, as you
said you thought I might do. It was in
the mountains of the State; and since I find it
common enough in all our swamps, though

belonging to the family of the
first series.

I have been very busy, and
have not been able to give you
any thing for a long time. I
am sorry, which is very true, I
am sure you will be.

I am in the
Aspl. angustifolium to you, by. I
am in the suggestion. I am
kindness Mr. J. W. W. W. W. W.
writes me requesting a few species

H. filices. He offers some very desirable
species in exchange, and has sent me a
kind of *Aspid. fragrans*. I wish to enquire
if you are acquainted with him.

I am making up this fall your large
collection of plants, beside other business.
and this work, added to the ordinary and
strange care of my business, as you
might see very early. It will soon be
; and I look forward with much

H

Dr. Hooker thus
alludes to his recent
death: — 424 the most
terrible of family afflictions,
viz the death of my
wife, having made
sudden work of her
soul — with her to be moving
and during a very
few hours observed
from my bedside —
"Bibb."

P.S.

Dr. Hooker writes: "I regret to say that
we have no duplicate of Bot. bonariensis,
Hildbr. so I send you tracings of two extreme
forms: it is rather a fat species, or rather
a more form of B. Lunaria."

I enclose the sketches Dr. Hooker
was so kind as to make —

I also send you (please return) the
~~of your~~ ~~catalogue~~ catalogue of Am. Ferns which
I sent to Kew and which ~~was~~ Dr. Hooker
and Mr. Baker have looked over, marking such
specimens as they desire. They propose to help us to
herbarium specimens of Ferns and other plants if
we want them. Would you like to help make
up this collection (at least by advice and hints)
and share in the returns?

C. G. D.

Cherished Mother

Nov. 10 1882.

My dear Mr. Thompson

I have just received your letter of the 8th inst. and am glad to hear from you. I am well and hope these few lines will find you the same. I am sure you are all well and happy. I am sure you are all well and happy. I am sure you are all well and happy.

The weather is very cold here now, and the winter is well advanced. It is very cold and much snow has fallen. I am sure you are all well and happy. I am sure you are all well and happy. I am sure you are all well and happy.

[illegible]

Chelonia, 1900.

"members of Friends Society" as the
 "theological education of the children of the
 Friends of the Society, and the other
 "I would not read it."

I have recently written with Mrs. Emerson
about in Boston a stone
of a magnificent specimen.
It is not in use for the building
in the nation, perhaps by, owing to
fixing upon the size, etc., of the
material, and then selecting a suitable
form and shape. Finding
one of the best of the material I
say that there are certain points which
it is necessary to be furnished;
and it would give me great pleasure to aid
in such a work. Now that an herbicarium
is being, if possible in the larger
city, and the work upon the
of the common grasses, to be grown.

[illegible]

I have I understand - a number of Antennaria Can-
adensis & montana & Cy will want a spec. of
this Antennaria as well as one of Antennaria
leptophylla & leptophylla. I have been busy with
the fields containing, & closely have I applied
myself to my hybridizing, - chiefly of Antennaria, leptophylla,
& leptophylla. My Antennaria, as my Antennaria
leptophylla & leptophylla, afford me much to
the point.

P.S.

Many of my hybrid seeds, - also
green etc., etc. are coming in fine; and,
should I wish to show any of them, could I
engage you kindly to come and care for them?
I would be looking for the seeds? I have
many to return to the owner of the seeds; but it may
be that I shall be unable to come at the
time.

L. G. F.

Sept. 10, 88

[illegible]

I am pleased to hear of your
 success in your studies, and hope you will
 continue to improve.

Can we influence, and so
a good deal of the blue glass drive.

I am sure we shall do much more
I was writing her and my sister
in prison in New London. If I could
write to her, it is not to be done. I have
to go and see her in the prison
before I bring you the same letter in
the month.

After your own assurances, I
nearly have my hope to send you anything
I may wish exhibited. This was the first
year of printing of my original writings;
and when I conceived the wish to have
them, they should have already been in
Boston. I must now wait till next
year. In other things I have to be
satisfied. I have many more in ascending
years. Does the Society encourage me offering to
serve. I am as eager much of my attention.

The ladies are gone to the school. Should I
write you. I am in a strong temptation
that you will be tired of writing me
this week. It is a good many days since
I have seen you. My resolution was to
write you on writing me last.

The Gardners' Charity (in the
Library) for some time of the
committee for the New Garden in
to you I suppose.

Our dear Mrs. Piper is indeed home again
from her long winter visit to Connecticut,
and her husband's health is improved. This
summer; for the day when the month
feared was upon her home is passed. My
wishes are for her health, for her
friends are with her.

Visited "Harpwin Pier" a day, and found
much more than you.

Truly, truly yours, W. D. Briggs.

Charlotte, Vermont.

Sept. 18th, 1895.

My dear Mr. Bennett

Relying upon
your goodness, and remembering
your kind offer, I venture to send
to you for the Annual Exhibition
the articles which I wish to have.

I have enclosed to you, care,
Agricultural Hall, 2 boxes, a large
one containing 1 pk each of 10
varieties of potatoes for exhibition,
and the same quantities of the same
to be used by cooking; and a small
box of dried grapes, - 2 small
boxes of apricots.

I am obliged to you by this favor of
yours. Since I find it impossible to
visit Boston before I leave on Monday

coming. I anticipate your presence
from meeting you; how much to tell
you; and will bring along the amount
of funds which I have collected for
you this summer.

I enclose a letter from certain
members of your committee, which concerns
you as much as we.

Good friend of the City; but should be
this last time with respect to the
1844.

Yours sincerely,

E. C. Briggs.

J. S. Thanks for *Typha angustifolia*. I had
some got home, however, before I found the
specimens in a rail-road ditch; near it.
The other species, did not come as among them
intermediate forms.

1
Salem, N. H.

Sept. 7th 1875

My Dear Mr. Davenport

With sincere regards,

I want to say, that, and thank as I can.
In next morning I got up from the river
for home, my arms full of plant-treasures, the
best of the good fortune cannot, my time and of
obligation to the cause of the last
few days, and my heart full of gratitude to
you, who saw it to great cost to himself, as
I could not but see, and was sure with
pleasure.

Does the science which I have maintained
since very nature, imply this last? It was not
I did not see your side, for, in fact, I
regard my own as mine, as I would.
My own side than I have been interested myself.
But in no way, as I have seen, and I have

[illegible]

I want to say much more, and I am
 almost sorry of your tediousness of going
 to visit in Burlington, yesterday, I
 happened to call on Prof. Perkins, as I had
 done in many two years. Did I tell you
 that he is a married man. He is a pleasant
 gentleman in his own way, and I am
 sure he is a good friend, although
 we are well separated by the distance of 200 miles.

I do not know what business they were doing
at, however, - - - - - before they left.

I have I think. I must also
 have some very little to do for my garden.
 I have a wonderful lot of things to do
 to make of them for the year, it is not
 well to plant them, I have had the
 of it everything, which would be a great
 to me. And if I could be to find as it is
 of the best things at the time. I believe
 in the world, I will be glad, as I
 must be, as the world is so much

Not only are Mansfield and Carroll things,
which are in view from my window as I sit
at my desk - but they are the first things
seen from miles away in the distance. It seems
as if you were standing on a mountain, and it
seems as if the water were at your feet. The hills
are very small. The trees are small against the
other mountains in the background.

Sam. H. Lyman, C. S. Pringle.

Charlotte, Vermont.

Dec. 15th, 1857.

My Dear Friend,

Mr. W. L. Garrison,

After your kind
writings as well as your long and interesting
letter, can come upon others. Every thing
deeply appreciated. I am most relieved
to hear that you are still well and happy
and free from trouble. I am sure
some things which I hope to supply, you
in answer. Did I ever send you
Litho and C. series?

You can never imagine the sympathy
I am attempting to make out my case and heart.
You have the right feelings in your heart
for me. Before I am ready to write again!
I feel of you whenever I return for a day or
two. Next Feb. you may come to visit
from me. Yours as ever,
C. G. Briggs.

Mr. Geo. Thompson
8 Madison Place,
N.Y.C.

Charlestown, Vermont.

May 30th, 1896.

My Dear Friend:

Calyss. I hope you
can keep it a secret of
the next meeting of the
Soc. Sec., if you think
it worth while to do so.

I am working hard at
it, meaning to keep
it secret with our friends
and put up 4000 dollars
this year. I will not be
secure for ten
years strong, roots of millions
before it is a fact.
Yours truly,
E. J. Pringle.

WRITE THE ADDRESS ON THIS SIDE—THE MESSAGE ON THE OTHER

Mrs. Geo. S. Davenport
Washington Place,
Boston.

Chickadee, Vermont.

July 10th, 1876.
My Dear Friend,

I am glad to hear
that you are coming in and
my request for the roots of
Williamsonia. Will you
be so good as to send them
between the 20th and 25th
of this month and with them
36 roots of *Hamamelis*
virginica and the same number
of *W. angustifolia*. I am satis-
fied that this request will secure
us some specimens with trouble.
If you can immediately
send to the collector, I will
be very grateful.

Later, I must hope to be
aided by you in the way of your
further collection here, especially
A. c. Pennsylv. & *W. pennsylv.*
and to see of your success.
Yours truly,
S. A. Peck.

WRITE THE ADDRESS ON THIS SIDE—THE MESSAGE ON THE OTHER

Mr. Geo. E. Thompson,
Harrison Place,
Baltimore.

Dear Mr. Davenport,

Can you tell me where
(in Virginia?) might
be found a good number of
specimens of this species
of birds? I see you have
it in the collection.

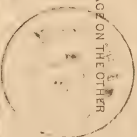

Yours faithfully

W. B. D.

Charlottesville, Va.
Aug. 7/86.

POSTAL CARD.

WRITE THE ADDRESS ON THIS SIDE—THE MESSAGE ON THE OTHER

Mr. C. C. ...
...
V. B. ...

Let me see the new
attractive pink paper in the
middle of the book, & you will find
it just to be the best, and just as in
a way to the Dr. Mr. Garrison of the
Boston Naturalist Society should have
something about such matters.

The propriety of form and content
there is in a good way worth
any, good reputation for your work
and good business in the
way. Is there not a good market in
Boston for such things? If not, there is
in N. Y. and I could help you find it.

I was consulted about the matter
last fall; and, well, it was not the best
and I told you, I would have taken hold
of the business. If you go on Boston I must
decide to visit Mr. Mayfield, will they ever
communicate with me? I am sure you will
be happy to hear from me. Write soon for the paper.
Yours sincerely, C. G. Pringle.

Charlotte Mass.

June, 1st 1871.

My Dear Mr. Pringle,

Your letter of the 24th was
received, and in reading it I was to the
last degree than I expected, so much so that
I was writing to you.

1 If more wishes can spring from
friends though they may be, you surely have
mine that this was for many years your
source of joy and comfort. There too first
was increased comfort. Dear friends will
never change your source of love, I am sure;
can you not bring it about that the strength
of this firm fast across our path comes
from our delight will turn you into another
just as sweet. I have sometimes thought
if I were shut up in a prison cell, I
could not within its narrow limits find
enough to feel and work to study to make

the 18th. I was troubled as I
went down the river as usual, with
the usual; but I was in the day time
and in the place, with a lot
of good. and in the same place
of the river with the usual
and I was in the same place.

[illegible]

Charlotte, Vermont, Nov 30, 33.

My Dear friend: It was very
pleasant to hear again a long
letter from you, and to find it
bearing that your respects are so
valued. Your suggestion
is important. I have often
wondered when the school
on my farm, the winter dis-
cussion, the discussion of
the winter was the same
as the summer, when we were
with you. I have to say that
I prefer to enjoy the things
and not write. I have
your letter about the 14th. It is
very good. I am very glad
you are some person in
your class.

I write with it with your
name. I have to say that
I am very glad to hear of
the 14th. The 14th is
not to be written. I have
not in a long time.

WRITE THE ADDRESS ON THIS SIDE - THE MESSAGE ON THE OTHER

Mr. Geo. E. Sampson,
Hamilton, Va.,
Boston.

Amphispiza bilineata, and some
others of common and rare species.
The latter - as a species - *Contopus*
abundans.

I send specimens to Prof. Brewster.

Am just returned from the
Mt. Mansfield region; The Woodhens
were coming out, and I secured
a few - with wings which
will show me migration, I think,
were fully developed.

Very truly

W. A. Davis.

1
Litchfield, Vermont.

June, 8 77.

My Dear Mr. Townsend,

Since we have collected
specimens, very under swamp *Batyptis*
being similar (I sent one it was
from the earlier, *simplex* *pinata*
character of the birds of the
& *variabilis* and more varied
into the more distinct *pinata* -
variabilis *pinata*, as reported as a
distinct and permanent variety of
birds, I want to try give you
simplex, this time with some *pinata*
specimens, June 8 77 in
one with *pinata* in this town
in company with *pinata*.

I am writing to you of the
most delightful. I shall have
soon I can get the map & through
your kindness, but a fine one I might
be drawing to send you for
Thomas. I would be much in debt
to you for this. If you
can send me the 10 and 12 for
which I am, I will pay you
\$2.00 for this. The single glass you
sent me for I found - but they
are doing well. But they are too far away
36 N. Virginia I had hoped it would
in 24. but as they are enormous with
- if you should include them with
in this price, I would pay you \$2.00
for

Yours sincerely

C. G. Briggs.

Charlotte, Vermont.
Sept. 22nd 1877.

My Dear Mr. Sampson,

I am glad to hear of the
growth of the plant and ever
improving in color. I am exceedingly
gratified, moreover, to observe that
you find in your subjects well sub-
stantiated botanical illustrations the
diversity in its mode used. This
must give you fine pictures for
I should think, than the ones at present
being offered, which you find up
with so much pain.

I have very little time to write
this morning, but I must first
thank you for sending the

As it was you who did it, the same
Brother I offered - for then and
the most delightful company I
was engaged in my botanical time.

I enclose some specimens of B.
Simpson which you are not to return.
I must mention to all your decision
that my end - to keep B. Simpson
is unalterable. Let me
express my feeling that - from a
practical and - varying in its shape
and in its habit - might be char-
acterized as a distinct variety of that sp.

I want the Cambridge Herbarium
Her. I am so much, for I think that
it is interesting to observe how the great
varieties found together, which of
the way out from the Herbarium.

I have several numbers of Agrostis

London from Mr. Austin. There is
the same you printed that it was
from London.

Could you spare me a single little
kind of our new Chloranthus?

I have from Mr. Austin a Herbarium which
are always found to be not all
agrees. It is going in my little from
London, and the same is found to be
the beginning of the same, so I can see
no further point; I thought it to Mr.
C. C. Austin.

I expect to send in a few more a
quantity of seeds of Liliaceae species to
and to England; I am not there yet
either, - and I have sent. Would it pay
you to send your seeds to me in that
price? In England where it is the same
amount of an Liliaceae, and there is not
and a demand for the seeds.

Charlotte, Vermont.

Nov., 5th, 1899.

My Dear Mr. Davenport

Your letter has come most opportunely and the books have at last arrived in this way to reach the publisher and in answer to your letter - you will see that more than I could for and you have not this in your mind I am to say you are a good friend and do not say anything about the books to the publisher, you must have them from me up; the order for this book which I am expecting from the publisher does not come until next week - all right, I think you should expect to do with the books - should you have a quantity.

I am much distressed by the
fact that it was my expense for the
first time around in the year
personally and brought me great
illness. Will you tell me if you
could be consulted in the way?

I enclose such business of
my friend Hordain & I could
secure, after my request to do so.
I have since more work of this
kind my correspondence. (A. B. Hordain
Bros. & Co. Paris) inform me that
it is too late to give the plants, as
the plants are scarce in autumn.
But as I am not, no more than
in the case.

I am glad you will share my
interest in the plants and the business.
I enclose list of my seeds and would
be glad to see any other species you
are for me.

Yours sincerely, E. G. Pringle.

attracts us; we would like to go up
as far as Lake St. John; but there
is a limit to our time, and there is a
limit to human strength; how much of
all this we can accomplish remains to
be told. I earnestly hope I will be spared
the tedious journey to the place of my
departure.

Shine of the ferns we shall find on
the cliffs of the Saguenay, and believe me
your faithful friend,

L. G. Pringle.

Charlotte, Vermont.

April, 20, 1899.

My Dear Friend,

Your kind letter of Jan.
12th, which elicited for you fresh
sympathy on account of your new sorrow,
has too long lain unanswerd on my
table, while I have been straining every
nerve to discharge my duties toward
my correspondents, and accomplish the
large amount of herbarium-work that
falls upon my hands. Since winter began,
I have toiled almost incessantly for some
fifteen hours a day, until I feel so tired,
spring has now at last come, and in-
vites me out into the fields again, but
I obey reluctantly, when I need two
months more to put up the plants already
in hand.

accept my thanks for a copy of your
Hors. Cat., and my congratulations
upon your success. I rejoice in all
your achievements, and can deeply
thankful that you can find in
botany so much relief from toil and
grief. I reflect how much pleasure
you are giving others also; and sincerely
hope you may go on in the way of fame
and usefulness, and your path may yet
be bright and free from trouble.

Last fall I began a correspondence
with Chas. Jas. Spurgeon of your city and
the collecting and studying of lichens
was his own; and throughout the present
season lichens are both a special object
of search with me. An opportunity offers
I search over the old stone walls, fences,

etc., in this vicinity with great interest,
and feel eager to go early to New H. S.
next summer for alpine species. Mr.
C. C. Frost once advised me to carry on together
the study of all classes of plants, and now
as we lie here alone, so near the grounds again
and again; but I greatly enjoy finding new
interest in my old haunts, which need
to become familiar and common.

You will let me talk a while
myself and tell you how I purpose
cruising up into Lower Canada this
summer. I expect my friend Prof. S.
Brainerd to accompany me. Though we
wish to go through with an expedition
up the St. Francis River of northern Maine
and go down the coast to Grand Lake
as far as practicable, it is the Saguenay
with its wonderful cliffs that most

Charlotte, V.C.

Jan., 28, 1880.

My Dear Mr. Thompson:-

Since the receipt of your
New Year greeting I have been struggling
through the distribution of my plants,
and have just mailed you, having put
up two Cupidines, Pygmaea and Mordonia
hypericifolia. (Of the last I put only two)
which are desired. As you do not care
about the ~~Hyx~~ ~~the~~ last one of my specimens
of W. truncata, which I show you
both.

It is the same story with me this winter, -
great amount of work. I have a great deal
of work on my hands over now, that comes
by way of my Census appointment; and I have
nearly begun the mounting of my plants.

Hoping your health is better, and that all your
 friends are well, I am, dear friend, truly,
 Yours, &c.

all this country is wonderful to me;
and despite the drawbacks to comfort and
the hardships of my work, I enjoy myself
greatly. In Arizona I have nothing to fear
from Indians.

Please remember me to my kind
friends the Tuxons and Mr. Robinson;
it is in my heart to write them, but
in my race with this rich and swiftly
thawing flora, I can hardly write a letter.

C. C. Finkle.

Tucson, Arizona.

April 26, 1881.

My Dear Mr. Sampson:

I have not forgotten your
kind interest in my journey nor my
promise to ^{send you} specimens of the ferns which
I met with. These I send in a little
parcel by the same mail with this. I
number them, and will thank you
to give me their names; some of them
I have determined to my satisfaction;
the remainder I have not had time to
study at all; and they are such as I
have never seen before. You may label
them all "Santa Catalina Mts., Arizona,
April, 1881."

It is three weeks today since I reached
Arizona, and this city; and the most of
this time I have spent about the
Sta. Catalina Mts. I found vegetation

as advanced on my arrival here April 5th, as it is with us by the middle of June; so you may believe I have been kept—exhausted—only trying to secure everything. And I have succeeded well, for I have already more than 100 species for my collection, — my sets, I mean, — not counting a large number of miscellaneous plants, phanerogams and cryptogams.

Shortly I propose starting for the Santa Rita Mts., and the San Juan Valley. Mr. & Mrs. Loomis are in this vicinity, but we have not yet succeeded in meeting. These regions are a vast-field for botanical exploration; no one man can examine thoroughly more than a corner of one of these territories in a single season.

I am pretty well prepared for work having bought a two horse team and covered wagon and hired besides the assistant brought with me from

home a man acquainted with the country and with the Mexican dialect, to serve as driver, cook, etc. He keeps the camp, while my assistant and I range the mountains and gather in the plants, and he does the most of drying of the plants.

This season is an unusually dry one even for arid Arizona; for some time I found the ferns shrivelled almost past recognition. A few showers occurred less vast, however, and then they unrolled; I am not collecting them largely as yet, because I think I can get better specimens after the July showers begin, and the young fronds come to maturity.

I have rooms here in Tucson for storage, etc., and expect to make this my headquarters for some time to come. It is a strong mud-walled city of 10,000 inhabitants, Americans, Mexicans, Indians, Chinese, Africans, Europeans, etc.

could cover much more ground, and
he was all the while talking about my
getting new species in advance of him, and
mouthing over it, envious of my strength, my
outfit, opportunities, etc. Some things I heard
with him and he suggested two specimens of
a number of such things as he had not
found. In return he gave me but a single
specimen that was acceptable; he forced upon
me some specimens of a common plant, half
ripened fruit, which I threw away and
have since replaced with a full complement
of mature specimens. Many plants of my
large collection of which I made 25 or
more as fine specimens as possible, he also
sometimes saw scraps, sometimes good specimens,
got - this year got the first time, whether earlier
than I cannot always be told, for he does
not date anything; never all these (perhaps
even the specimens he drew from me) I
am sure he is sending off to Mr. Watson,
and others in order to get them named, if new,

Tucson, Arizona.

June 19th, 1881.

Dear Mr. Davenport:

You say that you "have
a characteristic letter from Lemmon".
I will show to you other characteristics
of him which his writing is, as he
does, novel to me. I am a little ap-
prised by his conduct, but before this
I did not think of referring to you my
complaints, as I will now do.

Lemmon's ruling passion is a crazy
desire to find new species and get them
named after himself or his friends. Last-
year he came into the comparatively new
field of the Sta. Catalina Mts. and
found several new species, three of which
were named after him. He wanted to

Keep the field to himself until he could
fully explore it; and when he found
me here this spring, he was very jealous
of me. I was in the south canon of the
mountain, where he wintered last year;
so he and his wife soon went around
to the north side. When they came in
from there, we met in Tucson. They had
R.R. passes, little else, - little money; I
had a team and a good bank account.
They tried to saddle themselves upon me,
but I felt cautious; I wished to treat
them well, however, and took them to
the Sta. Catalina once or twice. We were
together, when he got this woodbin you send.
We were following up a canon, at one time
I was considerably in the lead; I came
to a deep and shady gorge which en-
cained a waterfall; in a crevice of one of
its damp walls I found a fern I had
never seen growing (*Aspid. patens*;) I

was bending over it, when Lemon entered
the dell; his manner on my announcement
of the fern became excited, and he
crowded hastily past me and began gleaning
from the wall all the specimens of this woodbin
he could find putting them up before me
(as it was windy, I gave him a little assistance)
and was allowing me to get a single frond;
when he was done with this species, he struck
his pick (he always carries a light pickaxe)
into the row of *A. patens* from which I had
just cut a single specimen (*rooted*;) and
began appropriating the roots for his trade,
without asking me (*until afterwards*) if I
had all I wanted. I was pained not so
much at the loss of a just share of the
fern, as at the exhibition of selfishness in
one whom I had thought worthy some-
what of a pleasant botanizing companion;

All the rest turned out like this
in the end. I was stronger than he, and

condition of vegetation is most wretched.
I am assured that we may expect
rains after a few weeks, which will revive
everything. The past few days I have
been about the south side of the Sta.
Catalina only to find that they had
joined with the heat a new terror. The
canyons were broken like a furnace and
many all their plants were withered; their
growth only came feebly to the surface here
and there, and the water was so bad
as to make us sick. You can not conceive
how dreadful such a state of things.

You ask if Mrs. Lemmon is really very
small. She is about the average height of
women. A very fit mate for Lemmon, whom
she calls "Lemmonia", while he always ad-
dresses her as "Annabell", which means, as he
explained to my men, "worthiness of being loved."

Yours faithfully,

C. C. Pringle.

Before I can myself send specimens.
He magnanimously told me of one species,
which he thought new, that I was en-
titled to. The credit of its discovery, since
we are also had found it. Since his
return to Oakland, he has sent a letter
to a Dallas paper mentioning a spread over
his discoveries in this country in which he
carefully avoids the slightest allusion to
another colonist in this field, and men-
tions certain things found by me and not
any of mine at all in a manner to lead
me to think it was himself who saw them.

In short, though I was put on my
guard by the letter of Mr. Wright which
you kindly let me read, I was disappoint-
ed in Lemmon and quite disgusted over
his behavior. After the trip to which I
was attached, I decided it would not
be convenient to carry him and his wife
about further and on longer trips; and I

think they preferred to work at a distance from me. Don't infer that we had any trouble when together, for we separated on most friendly terms, and they had much to say in my praise, I have been told.

Now about the Woodrat; Sumner told me that he got it last year on Mt. Graham N.E. of here and what Eaton said about it. My talking to him much of your ability among ferns and telling him of your having named a n. sp. for Parish (with whom he is not on good terms and over whose news he was much excited,) was the occasion of his sending it to you; he made haste (I wonder if he did not send it before leaving me,) to do so, because he feared I might do the same, and your comment and friendship for me might wash it. W. Rumphii, *Dampiera*. This fern you will have received from me also, on two;

for I found it in another canon which I explored alone the day following the one in which Sumner got it. Sumner declaring when I left camp at sunrise, that he could not climb the mountain that day. Were it not for the structural likeness to *D. obtusa* or *D. rigida*, which you authorities so well agree upon, I should, judging chiefly from its habits, think it quite a different species from either. It grows in wet-shady woods, very unlike the habitat of *D. obtusa* in Vermont; but then the climate here is so different from that of Vermont; even *Pellaea atropurpurea* here has to take to the margin of brooks for moisture enough to live on.

I would be glad to see you for you the ferns you mention but send all ferns not growing in mountain brooks are so shrivelled up, almost beyond recognition that I don't send 10 miles thence. This is the third year of severe drought, and the

Portland, Me.

Nov., 30th, 1861.

Dear Mr. Tappan,

Your postcard of Oct., 3rd
to care of Mr. Green was forwarded me
in by post Dr. Fung. I have all along
been in the greatest trouble in Arizona
felt grateful that I was safely and far
away from there; for I wish to be
my life to do much bettering there
in future.

When Prof. Sargent took me into
this institution, he appointed me to

work for each month, that
I was able to sustain but little
time for study; and, though I have
collected a great number of things, the
few that have come in my way, I
have not of course found anything in

wish you could see some interest.
I may mention that, while in N. Cal.,
I got many specimens of *Aspidium* *Mont-*
icola and in the State I have made
large specimens of *Polypodium* *Seubertii*,
and many of *Aspidium* *negundo*.

I have been many three months in
Oregon and Washington, but hope to leave
in a few days for San Francisco, and thence
go directly home for a few months at least.
Mr. Sargent will send me a package
of seeds, after which I shall expect
to finish the summer by collecting in some
part of the coast. Though it may be some
times in they can be distributed, I find
it more in buying up great numbers of
plants at once. For California I got
about 150 species, and my Oregon collection,
largely of arboreal species, will fill a great
box. So much swathed up, as Dr. D.

and the best of my specimens were
in the getting acquainted with the botanists

of the region, their credit I am glad
to say that I feel free (with my in-
crease in the State) to send up them for,
agreeable company. Last Sunday I got
most pleasantly in the name of the
some of the young but more promising
which I have sent to and to you
anything stronger to them. One up

Mr. C. F. Henderson, Portland, Oregon,
Colli., Ex.; and, as I suppose his name is
in the Bot. Director's, I will beg you to
get it inserted as above in Mr. Cassin's
issue. Mr. H. is a trader in this city,
and a fine young gentleman; will probably
work next summer in the company
unexceptional field of S.

Now I should like to see you and
the *Wentz* *Gazon*; it is possible that I
shall visit Boston, if I have this
winter. Love with.

Yours faithfully
C. G. Pringle.

Charlotte, Vermont,
Dec., 21, 1881.

My Dear Friend:

Home from my first
botanical journey to the Pa-
cific Slope; only for a few miles,
I suppose. Then S. Cal. and Ariz-
ona again. I think I would
go again from Portland,
Oregon. Sailed Nov. 29. Stopped
the day in San Francisco, but
saw no botanists but Dr. K. L.
Cogg. Spent a day at Colton
with Dr. Purdy and the Perkins
Brothers. They are fine men.
Some things still in flower there
and the weather delightful.
Stopped a day in Tucson; there
and down in frost on the Colorado
River; on the hills found a
Lycium in fl. from in these regions
and withered up. Spent a day
in the Mts. Pinalia. Hope to
go to those mountains soon.

F. with truly, C. G. Pringle.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THE REVERSE

Mr. Geo. E. Davenport,
8 Hamilton Place,

Boston,

Mass.

Charlotte, Feb. 5, 1882.
Dear Mr. Davenport

I am just enjoying looking
over your account of the
Feb. I did find that the
iron ore. & the cliffs
of Little Lake were black
were asphaltum something, var.
Scopelorum; and the
the plants growing in rocky soil
on the summit of the mountain.

The springs of the Secon-
dary were br. sulphuric acid.

I do mean to go to the south
of the S. to the lake. I did
did not go last summer, and
will keep my eyes open. Rain coming
from the S. East. with, I think the
more open of the Peristite.

There is much that is sitting
away of the impossible. The waves
of the lake are better than
they will ever be as a covering
of the things. The things are
the things, the things.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. E. Davenport,
8 Hamilton Place
Boston,
Mass.

San Diego, Cal.

April 29, 1882.

[illegible]

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. E. Sampson,
6 Hamilton Place,
Boston,

Mass.

by clothes so conspicuous and free
from a burden so onerous.

For my summer my intention
is to go into the Sandwich Mts. I wish
to think of London as something there
all through the season. But there are
some regions as promising in that South-
western world.

I don't know when I shall again
see you, for I have no errand to
Boston.

May I trouble you again to thank
Mr. Brewster a parcel of Curios?
I really don't know whether it is

"Boston", and I don't want to risk
losing these valuable specimens.

Hoping you will be able with
to think kindly of me, perhaps to
speak of me apologetically
occasionally, I remain as ever,
your faithful friend, C. C. Frings.

Charlotte, Vermont.

Nov., 13, 1882.

My Dear friend:

I am home again
and sooner by a month or two
than I expected, when I wrote
you last from S. J. Thanks to
Mr. Sargent's outrageous treatment.

Ever since I declined last
spring to continue there or for
years longer in his service and
engage on the N. Pac. Survey, I
have been unable to please him.
All the season he has pushed me
on to an early completion of the
Museum work, demanding im-
possibilities of me. He wished
me to suspend in a great measure
(or entirely so) my own collecting,
but offered no better terms to com-

pursue me. Through I felt
under obligations to my subscribers
equal to that to the Museum,
for I had been made by the terms
of my engagement with Mr. Sargent
to look to them for half my
rewards, I did this to a great extent,
and occupied the Museum work
for my own but 33 days in the
entire season. Yet I was charged
with ungratefulness, in complaint, and
even, as I understood it, with dis-
loyalty. So that a good friend of
yours and mine through me I hope
to say. I would be justified in re-
signing.

Only the desire to carry through
to the end what I had undertaken,
brought me to the work. And, when
I reached Tucson and found
my expected funds withheld, it
seemed necessary, to maintain

my self-prospect, that I should
telegraph my resignation and start
for home directly.

I recollect saying to Mr. Robinson
a year ago (perhaps ~~two~~ years ago,) that
I should endeavor to please Mr. S.;
but that we should never make me
his back. I expect him to be terribly
angry and to give me a bad name;
but I can give figures to vindicate
myself; and, happily, there are now
a few in the West who are able to
attest what my career has been. I
have had the sympathy of those who have
seasons.

So, My Dear Friends, this year we
passed without my having done much
for you or your favorite branch. But
let us hope that the future will
more than compensate for our losses
of this season, when I have tried
at my own hand with undisturbed

to be telegraphed and write to
Dixon and San Francisco to get
me 10 days on in the work, and
hurry on funds.

California volunteers have all
the same sympathies with me,
and now they are pleased to see
that I have "worked up the
very passage." Perry and Dixon
in particular are known of the
nature of my relations
with me; and the former employs
in strong language to express
his opinion of the business, &
had to suffer.

Have read the enclosed and
I don't know whether Miss
Turk is still at Livermore Falls. I
am so glad to hear her plant from you,
and that she can supply others.

Yours faithfully,

L. G. Pringle.

Charlotte, Vermont,

Nov., 23, 1882.

My dear Mr. Tammam:

I thank you for your generous expression of confidence in my integrity. My trouble with Mr. Sargent makes but a short and simple story, as you will see, when I can tell it to you completely. He wanted to accomplish his ends without regard to any interests guaranteed to me in our agreement, and when I tried to discharge in some measure my duty to my patrons as well as that to him, he thought to bully me into submission. He withheld funds. Then I resigned by telegraph and started home suddenly. He was surprised, and saw he had made a mistake, and

Charlotte, Vermont.

Dec., 9, 1882.

Dear Mr. Sampson.

Thanks for the rare fern.
Ophi. bulbosum came with
from Dr. Garber. I believe that
specimens of *B. matricariaefolium*
can yet be found in N. H.
false enough to come pretty near
B. ovale.

None of the species in Latour's
Crest List & I lack but 13:

Helleborus

Chelidonium

argenteum

Pellaea aspera

punctulata

ternatifolia

flexuosa

Pharis acuminata

Asplenium trichosporum

Asplenium circutarium

Phlegmaria californica

Asplenium juglandifolium

Asplenium flexuosum

are willing
if any specimens
are to be sent, I
will accept, I
am with thanks,
Stages of *Pellaea* *argentea*
are *Asplenium* and *Asplenium*
especially after drying that
one and is really not the
Asplenium, it is the *Asplenium*
form. I have seen this
little fern.

but as I have bought *Phlegmaria*
Texas & Mex. plants and expect to have
of 1882, some of these will come from
10 now, I am confident.

Yours faithfully, C. G. Phipps.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Ms. Geo. C. Danvers,
8 Hamilton Place,
Boston,
Mass.

Charlottesville, Va., 20, Jan., 1843.
My Dear Friend: Your letter
of Dec. 18th and 19th full of
interest that interests me greatly
even while I am in the midst
of my distributions & sets of
L's exercises and many large
volumes, - with many almost
to make more for his own
use. But I am falling under
the weight, then comes of mounting,
etc. I want to get my harmonium
in a perfect order before I leave
it again. Have patience with me;
I would have half believed that
I should yet give you these Ar-
rington forms and others. I was full
of it to be sent whenever I please,
whenever I can; and with the
exclusive patronage I now enjoy,
I feel my Christend purpose
may be realized. I have no
idea where Mr. Sargent has in
mind (I hear nothing of it.) I have
in mind Dr. Parry's mind to keep clear
of entangling alliances. Yours truly,
C. L. Pringle.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. L. Tammesport,
9 Hamilton Place,
Boston, Mass.

Tucson, Arizona.

24. May, 1883.

Dear Mr. Savoyard:

That our earnest-
wishes that some fern might bear
together our two names, quite as its dis-
coverer and now as its author, has been
realized, gives me deep joy. and I am
grateful to you for the part you have
borne in the matter. I knew of your
belief that I should find an undescribed
species, but I dared not hope that it
might be done within the limits of
the U. S.

Its habitat is, — Base of rocks in
the Sierra Tucson, a low range of dry
mountains, five to ten miles west from

Tucson, whose flora bears a greater
resemblance to that of the deserts
and desert-hills about the lower
Colorado and in north-western Sonora,
than to that of the Sierra Madre Mts.
On these hills the fern is abundant. When I
first came upon it, there were but few
specimens that were not shrivelled up on
drought. I got 12 to 20 poor little clumps.
On the 16th inst. a rain fell over this
region, a rare occurrence in May, and
on the second day thereafter I went out
to the hills to gather specimens for my
distribution. I found the ferns unshrivelled
and green in some places; and of great
pain secured some 25 satisfactory specimens.
This was before I had heard from you that
it might be new, certainly was new to our
territory, or I am sure I should have
tried and elaborated widely to get
more, though suffering thirst and exhaus-
tion.

Two days ago, after receiving your letter of the 13th, I walked out again five miles over hills and mesas covered with sharp rocks, the thermometer indicating 100° in the shade, the rocks so heated as to burn my hand; but I found not a pond that was not withered up again. I only could get a quantity of roots which I propose to take home and plant in the hope of getting more specimens from them.

I believe I shall go home for a while. Rusty has arrived at Prescott and urges me to join him. I see objections. Business at home suffers; my assistant is ill and should be taken home. The success of Gen. Crook's expedition is doubtful, his very safety in doubt. I am warned to keep out of the Southeastern mountains; but they must be like the Sta. Catalinas, - vegetation dormant. Yours faithfully,
C. E. Fingle.

Charlotte, Vermont.

5th June, 1883.

My Dear Friend:

Delightful exchange!
Soft-and odorous air
for biting ^{dusty} winds, cool
soft- green sward for
hot and flinty rocks
cool springs and brooks
and grain to feed them
for dry "sand washes."

A month or two in hybrid
ising. Then I am bound to
return. Dr. Parry says Com-
mon may go to A. in Aug.
and may not, as he is feeling
My last was Ch. Eaton's, was
it not? our true prince.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. C. Sampson—
8, Hamilton Place,
Boston, Mass.

Charlotte, Vermont.

17, June, 1883.

My Dear Mr. Davenport.

Your letter of the 10th was duly received as well as your supplement and check list, for which I am really grateful; and last evening came the fern plate, kindly and thoughtfully mounted in your own way, which I shall cherish as a precious keepsake.

My advertisements in our botanical journals are of little avail; a very few small orders for selections may have been obtained in this way; but I have never sold a set, I think, thereby. I did not suppose but you got many orders, however.

I am interested and pleased to hear
of the new fungus ~~of~~^{on} *Chetanthus Pringlei*.

You must have more specimens of the
fern, and I send them; Cater I hope
to have more for you, and better ex-
panded specimens.

I am anxious about your health
and about your very life. Can't you
come to Vermont for a change and
rest? Is it not possible for you to
gratify my wish, for ten years cherished,
that I might have you here to show
you the homes of our rarer ferns?

I am too tired today to write much,
for I am toiling on the farm, trying
to repair some of the neglect incident
upon my absence during the two ~~last~~^{past}
seasons.

Yours faithfully,
Cyrus G. Pringle.

Charlotte, Vt., 15 Aug., 1893
Dear Mr. Sampson,

Dr. Parry was sick with a malarial fever, and had to give up the Colo. trip. Then I turned again towards Arizona, but I am disappointed and have had to give up my work again at least for this year. Could not find a good assistant. The hoped-for valuable pieces of sufficient value in Arizona did not come; and when in view of these facts I thought of giving up (a course almost recommended by the depressed state of my purse,) the fears and distress of my mother were such that I had to stop talking about going. I have thought of visiting Dakota and Maine (Mt. Katahdin), but am too much discouraged and too doubtful for even that. I would have started for Katahdin this week had I secured good company. Can't get up enthusiasm enough to undertake alone the work. If we thought we could find Capt. Turner's notes there would we not be willing to go with us? At any expense?

Yours faithfully,

C. G. Fernald.

1882

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

240 P

Mr. Geo. C. Hamner,
8, Hamilton Place,
Boston,
Mass.

Charlotte, N.C.

12, July, 1883.

Dear Mr. Faxonport! I have waited and
looked in vain for your coming; and fear
you may be ill.

I have accepted Dr. Parry's invitation
to join him during August and September on
a botanical journey through the southern and
western part of Colorado, New Mexico, and
up Arizona. Dr. Parry writes that Lemmon will hardly
be as much more, I doubt if he goes to Arizona or
in colorado.

Wm. W. W. W.
Boston,

Mr. Geo. E. Davenport,
Hamilton Place,
No. 101
8-83

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Charlotte, Vermont.

22, August 1853

Dear Mr. Fawcett,

I am delighted to hear that you are to have a vacation. I really think a visit to Vermont will afford you more advantage than one to Mr. K. & his son. You will see in their home and father far more of your favorite. A trip thither would be far less exhausting - therefore safer for you. Thus it has so long been your wish to come this way, a visit to Vermont comes first in order.

Trust me to have work for me meanwhile. You will take the morning train Monday, I think.

for Charlotte in Kentucky
reach our station about 5-
P.M. and (if you don't see me,
come to East Charlotte with
our mail wagon.

Now may I beg you to do me
a favor? On my travels I see so
many strange scenes and curious
objects, so many interesting plants
and trees whose pictures I see,
that I have been thinking of
buying a camera. Can you, and I
can't give up the idea. Last
week I enquired into the Blair
Tourey Co., was assured from the office
(471 Tremont St.) that it was just
the thing. In "Science" for June 1,
Moses King, Publisher, assures of the
trustworthiness of the firm. So I have
decided to send you \$25 and
beg you to visit the Blair Tourey Co.

Co. before coming; and, if you
are satisfied that they have
a portable dry plate camera
which I can use successfully
to buy one and bring with you.

I would not think of "developing"
the plates but to put them into the
hands of a photographer.

I would like to take photographs
the size of ordinary stereoscopic views
and suppose carrying 5x8 inch
plates preferable.

Perhaps you will be pleased
receive and in plain paper to
be able to find some instructions, to
enable you to work the machine,
when you want I get away over mount
ains.

If you don't approve, don't feel
bound to purchase anything. Of course
I don't care for "elaborate nickel mounting"
and "best mahogany," but I want
a best camera, and if you can

new enough will stand more
exposure. They may have made
some improvements since last
winter; or this "Kaiser Combination
Camera" may be better than the
Daguerre.

Just took work, I think, in
Camden made by Scrivener, N. Y.

It is for the Lib by
I take in making the request
but I hope you can find something
which will add to the pleasure
I am anticipating for us.

Very respectfully

Yours truly

C. G. Burleigh

So as
Come to give me all your vacation,
if I can succeed in entertaining you.

Charlotte, N.C.

30, Sept., 1883.

Dear Mr. Sampson:

I am glad to hear from you by your welcome letter of the 27th, that you have had so good success in photography.

I have put up to send to the express office at the first opportunity the tripod (Glad the other will pack better,) and enclose herewith the \$6. you need to cover expenses of exchange, etc.

Don't send back the camera, etc., until you have taken all the views you would like to have; for I am doing nothing else than picture groups nowadays. Jimmy and I have been out every ^{work-} day since you left - (excepting two rainy days,) and

have secured about 100 bushels of
grapes already.

Parish is to be married Oct., 3rd
in Newark, N. J. You may expect
to receive a call from him on the
8th or 9th. I trust my good friend
is getting one of the best of wives.

I am deeply grateful to you
for bearing in mind my unhappy
situation. I had a selfish interest
in your proposed visit to Mrs. Piper, being
in hopes my two dear friends would
hold a council over my case, and
thereafter shed on me a ray of hope.

But I do want to undertake another
botanical journey. Do you notice that
the yellow fever adds another terror to
the west coast of Sonora, where I have
wanted to begin my season in Feb.?

Yours sincerely,
C. G. Pringle.

Charlotte, Vt.

26. Oct., 1883.

Dear Mr. Javenport

I send back Lemmon's letter, which I have read with interest. It seems he did again visit the Anacrusa Mts. and his "Conservatory Cañon"; and that he proposes to explore some "unknown mountain range" next year. It may be that he takes a clew from our new Christiana, and wants to go among the desert Mts. ~~to the~~ southwest from Tucson, as I do.

I have two copious letters from Rusby, now in Franklin, N. J. Under the circumstances his success was good, 400 species for his det., and many more will collect us more in the West, but intends to travel "in other lands" in it of medicinal plants.

Your success in photography
leads me to hope that I can
succeed.

I am wishes to leave early
next month, after which I
shall be confined at home by
chorea; but, if the camera comes
before me again, I shall endeavor
to go again to Smuggler's Notch to
photograph its peculiar scenery.

Have you noticed the article a "Vacation
in Vermont" in the last number of
Harper with illustrations of Mt. Mans-
field and Smuggler's Notch?

Yours faithfully,
C. G. Fiske.

This single lens, to replace the one now here, I want one of first-class efficiency, — no more; for I must not waste money of fancy accessories.

Would this nice box you have provided hold a '76 camera and lenses, etc., or would it be best — to get a canvas case, or, perhaps as better for packing in a trunk with heavy articles, a larger box?

If you will please enquire what would be the expense of say, —

'76 camera + (Case?) + say 4 "single" or "New Style" holders,

Pair of Stereoscopic lenses +
Monium or Sachtus lens

I will consider the matter of a purchase.

You are right, one of these holders does not shut close into the camera, (never has, I believe,) but springs out. I have tried to hold it close.

(Rushy has — me 12 very good and interesting views.)

Charlotte, 31, Dec. 1883.

My Dear Mr. Larnport:

I still adhere to my wish to have you enjoy photography after you have got so you are capable of doing so.

When abroad certainly, and whenever at home intensely busy with distributions and herbarium work scarcely less, it will be impracticable for me to develop my plates and print. You would find some pleasure in doing so, will probably have the time, and are handy to chemical and other supplies. Then, if there is any sale for views, you can effect it, to an extent sufficient to pay for materials at least. Let us hope, so that after the first outlay, the business

will not be an expense to us.
The plates can come here with
my plants from time to time, and
be sent right on to you.

I think my funds will admit
of my getting a new outfit with all
advantages, and turning over to you
their camera and lens and one
or two holders. I would not ask you
to pay me anything for these. If some
time you are able to do so as well as
not, and I need money, you may
pay what you think just. But
I have no idea of the market value
of the assistance you are rendering
me (you have been paying out money
for ought I know,) or of the work
I am asking from you by my pro-
position. I should think you might
convince your conscience that you
will be paying for these things in
work.

I open Sewell's Catalogue.
Has the Blair Co. perfected a
better camera than Sewell's
No 203, or '76 Camera?

I do want a swing back, and
a front-board for taking stereoscopic
views; and, then, a kinged ground-
glass plate is preferable.

Will you kindly enquire and ad-
vise about lenses. Will there not
be less chance for failure with an
instantaneous drop? Would not a
metal drop be less likely to get dis-
colored than a wood drop? Would
instantaneous plates be more expensive?
For stereoscopic work would "Imitation
Dallmeyer" matched lenses at \$17. be
as good as any or good enough?
or would they be better? ^{See also, "Sewell's" 1875 in cat?}
Are the Morrison group lenses, (B. \$40,
C. \$50, CC. \$70,) much superior, and
how, to the Dardot lenses? These seem
to have wood drops. Of course for

Further (how I must pester you in this matter) will a '76 camera set upright? I must have such an one.

I am glad to hear by your note of the 28th that the East-Males are 'pretty well exposed'. I had so little faith in "lightning" exposures that I probably erred on the other hand.

I am not surprised at the intelligence of the death of your mother; with you I rejoice that you could so dutifully and tenderly care for her in her last years of infirmity.

My daughter ~~was~~ spent many weeks within 20 miles of here, without writing me, and amid such surrounding (under such oversight, I believe I may say,) that I could not think of visiting her. I heard that she and her mother were going to Boston; and a hope arose that through some good friend I might

put a letter into her hand; but I was surprised that an avenue of communication with her should so soon be opened to you. I beg of you not to let it be lost or closed by reason of suspicions around in her mother. How I wish you might meet my daughter and disabuse her mind of the false notions concerning me, which have been assiduously implanted in it. At least - (as it seems to me,) you can through your sister convey into her own hand a letter from me.

Now I am glad that I told you so fully and fully my feelings toward my poor daughter. I have now little hope of enjoying her society, while her mother lives. It may be best that we should not meet; I want her to know that I have cherished a father's love and that there are good people, who love me, as they understand me.

Yours truly, C. G. Pringle.

1.
Charlotte, Vermont.

17. Jan. 1884.

Dear Mr. Thompson:

Just getting out of the
woods of my last hiberna-
tion. Next preparations for
my Mexican journey. Don't
be overanxious about my safety.
I shall move forward with an
eye to keep in safety.

You see me in the inevitable
kindly. But what work is waiting
can I really do. Oh, I must go.
is it not the way of my duty?

After I get some money, I shall
want to be getting a fresh supply

Charlotte, Vermont

11, Feb., 1884.

Dear Mr. Davenport,

I hasten to remit the balance, \$10.38 you wrote.

Friday I spent several hours most pleasantly making myself familiar with the new photo. outfit. Thanks to your careful directions I had no trouble in doing so. I am charmed with the outfit; I should think I might do all I wish with it.

I hope you will receive back your first love, and find much more happiness with it. I fancy I shall not often use the pair of lenses. With this Sartor W. A. you make capital pictures. I only hope I can approximate to your excellence. Your ingenuity will easily prevent the leakage of light on the right-end. I have thought strips of black velvet

pasted in the right place would do it.
While waiting for a chance to send
it to the Ex. Office I may take a
few views, and send to you in
the small holder, to be developed.
If so please print two or three
pictures and send here to my name.

I am now waiting for Fanny to
come back from Canada and take
charge of affairs.

I now think (as I hear that vy-
station in S. Arizona owing to a
mild winter is more advanced
than I supposed, and as Dr. Gray
hopes later to secure for me passes to
help me cross the Mex. R.R.) I shall
go right to Tucson and travel first
through the warm low desert country to
the S.W. Yours patiently and faithfully,
C. G. Pringle.

and the two I would upon phrase and
one each to Feb. = Feb. A. H. 1884.

I must say I don't feel so con-
fident of my ability to manage suc-
cessfully the new camera as I would
like to be. So many diaphragms may
prove a snare to me.

Hoping you and Laura are
now restored from your misfortunes,
and wishing you and yours every
blessing. I bid you another goodbye,
and remain faithfully,
C. G. Pringle.

Charlotte, Vermont.

21, Feb., 1884.

Dear Mr. Savenport,

I have sent to the
express office your camera and
tripod in two parcels.

Don't give yourself any anxiety
about payment. I don't want you
to pay in cash. I would have
kept the ticket to W. A. Lewis, whose
use I had learned, had I not
been desirous that you should enjoy
so fruitful a source of pleasure.
I hope you can again do this as
fully as you did last fall; and
I trust you will not find it an
expensive pastime.

I have lately had misgivings
but I was asking you too much of
you in depending on you to develop

my plates. If so, set-it-down to
my ignorance & the expense of
this in time and money, and
depend yourself from my impositions.

I have tried developing two plates,
but am quite at a loss to know if
I have been successful. It do this
seems easy enough; yet as I look
into the 'art' - I am ~~attracted~~ (in view
of the abundant work already re-
quired of me,) from undertaking to
learn all its niceties and to acquire
skill and judgment in its operations.

With Tucson as my base for a while or
less - I shall hope to get a photographer
to develop a few of my first-plates and
give me rules for timing. Also I have
a hope that I can send to you in a
package of from two or three plates. I
would like to go first - for Chichauatan
Principi, and at the same time secure
for you a view of its habitation.

You may be surprised that I am
not away on this. I was about ready
to start on the 14th, when my post
assistant, whom I had had in training
all winter, with contrary to all ex-
pectation chose matrimony rather
than travel. So I have had to
find and get ready another.

Now I hope to be off on the 28th.
I expect to stop with Dr. Barry a day
or two. Possibly he may influence
my course, but I now think I shall
go right to Tucson. I want to make
a journey through the southwest-region
whilst East-India runs me there N. W.

I think you will hear from me
next - at San Francisco.

My daughter is still in Vermont - but
under surveillance.

In the holders you will find 4 plates
to be developed to practice for my experiments.
If you can get good pictures from them

Charlton, Vt.

26. Feb., 1894.

My Dear Friend, your post-card
of 23 is received. My sympathy
and is with you, and earnest
hope that your family may all
come through this affliction
safely.

A great joy! I spent the
day yesterday with my daughter,
not seen since 12 years! She is
a dear and lovely girl. She
may go with her mother
to reinforce Dr. Cullis, Faith
Doctor, Boston Highlands. I
have given her your address and
hope you can meet ~~and~~ that
she may obtain a ^{knowledge} fuller ~~of~~
of her father through your kind-
ness. I expect to be on my way
tomorrow. I dread a little the
springing off. Hope I may return.
Yours faithfully,
Pringle.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. C. Sampson,
Hamilton Place,
Boston, Mass.

Davenport - Iowa.
5. March, 1884.

Dear Mr. Davenport,

I was agreeably surprised to find here last evening your kind letter of Feb. 26, and was very glad to be allowed to hear that your children are out of danger from the fever.

As I did transfer the plates after exposure in the two new old rollers. I thought my camera light safe. I feel sure that the rollers and camera I am bringing west are right & safe. Will follow our advice about consulting a print-maker in Tucson. Thanks. Am not surprised to hear that my developed plates are "faded", so careless.

I am passing a day or two most pleasantly in the desertum and house of good E. Parry. Expect to start on tomorrow evening for Ft. Tucson, where I am glad to know I may expect soon to hear from you again.

Yours faithfully,
C. G. Tringle.

Tucson, Arizona, (mss. no. 2)
16, March, 1884.

Dear Mr. Savenport,

Your second letter to me
in care of Dr. Ferry was received
just as I was leaving Savenport.
I think the likeness of my friends
(the two interior views) perfect,
and shall be delighted if you
can make some fine pictures
from my exposures, as the two
ladies are invalids, scarcely
leaving home, and I intended
to give them a pleasure.

The hints sent here by post - and
I am trying to profit by. I have
next my room here a dark
closet, and, as I manage, have
no idea that light can injure
my plates.

I have made two or three exposures, and shall try to get the plates exposed to form in a package of pressed forms? in the box.

The photographer here says it would take an entire day, and a fresh and full stock of chemicals for him to prepare himself to advise me. The trouble and expense deter me from employing him. So I try this little piece of smuggling. Oh, if you can only see the scenes which I saw on the ground glass!

I reached here on the 7th, jumping out of February in Vermont into June in Arizona. Thermometer often 80° and all the country green and flowery. Abundant rains, still continuing, are making this such a season for verdure as Arizona has not seen for years. I have already begun collecting.

I have bought a span of horses and a large spring wagon with a white canvas cover in which we can keep cool and dry and travel with ease. My hopes of success are high.

Am getting ready to travel southwest, where vegetation is more abundant, and hope to get into Mexico. If I could only get so far as the Gulf of Cal!.

Will not expose many plates till I hear from these on my return here.

A beautiful and loving letter from my daughter, who has visited my home, thrills me with strange emotions, with pothos, really, have its reward?

Peace reigns among all the Apaches.

Faithfully,

C. C. Finkle.

* Some letters for collection when you may
if you please send to the Department

(with photographs) of March 5th &
26th, and I have a letter of March
24th. ^{the} ~~the~~ prospects of Arizona views.
Sorry I over-exposed; but I can be quite
enough. From a kind letter from Mr.
Hippinson I understood that he got some
idea of Arizona mountains from my photo-
graphs. Elizabeth Pringle is in the low
mountains called Sierra Tucson five
miles west of town; the Sta. Catalina Mts.
are a dozen miles north-east from Tucson.
Sorry I over-exposed, because I exposed 8
plates on my Mexican trip, with the
D. M. and arrange to send them by mail,
if possible. Was misled by Spaulding's "Serenade".

I sometimes feel troubled in conscience,
when I consider how much trouble I am
making you in this. More soon again.

Yours faithfully,

C. G. Finkle.

Tucson, Arizona.

17, April, 1889.

My dear friend,

I am back again
from my first journey into Sonora;
'it was' a long trip, occupying
nearly four weeks, during which
time I travelled nearly 800 miles.
Not a single unpleasant occurrence
to mar the pleasure of the trip;—
only this; that is a very dry
country (Western Sonora) and in
the regions near the Gulf of Cal-
ifornia watering places were 15 or
20 miles apart and grass so scarce
that I had to hurry past some
good colonizing places, particularly
upon the desert plains. I reached the
Coast at a point some 90 miles
south-west from Altar; and there

nothing was growing amongst the
rocks and sand-hills upon which
my horses could feed, so I had to
crowd them (too fast-growing weeds)
instead after a brief day's stay. This
you may be sure was a grief to me.
One, it is a fearful country to travel;
yet missing men there, who hospi-
tably entertained me as I passed them,
assured me that so verdant a spring
as the present had never been known
to them since their stay there.

Well I brought home a big
basket full of choice plants, some of
which I am confident will be found
undiscovered. Ferns? No; on these
sun-burnt mountains of W. Sonora I
saw only two ferns, *Noth. Stockeri* and
Sinclairi. I will not say that no
others grow there; a thorough search
might reveal others.

But on my way back I spent three
or four days among the *Bavaguiveris*
Mts. just on this side the Boundary, and
there were many ferns, including a *Pellaea*
which may be *P. flavescens*, (I do not know
that species,) though I fail to see anything
flawless about it, and a *Notholaena*
with fronds too narrow to send to
me for *N. dubitata*. I will enclose
bills this time. — With the plates.

I want to return and make a
long trip along the Boundary westward,
and will probably start the first of
next week.

Just now I am on the point of
driving over to the Sta. Catalina Mts.,
where I hope to find Will. Parish, who
has come to botanize Arizona this summer.
You will see dear Dr. Parry in a
few weeks, or he leaves your coast, thence
in June to Europe.

This morning I got your letters

Post-script.

The postmaster tells me he will take the plates, if put up so they cannot break; so I send the 8 taken on my Mexican trip and one just-taken (Santa Catalina Mts. from Tucson) as before, in accordance with your advice.

Now I hope you can make good negations from these Mexican plates! Especially Nos. 3 and 4. Yet - they were timed by the same faulty rule as before.

The officials at the Custom House on the Mexican border were so courteous and kind, permitting me to enter Mexico free that I bestowed myself of photographing the Custom House (Aduana) as a slight return. They were greatly pleased. Their homes and friends are, I suppose in some far-off Mexican city (the capital I think,) and views to send to their friends would be most highly prized. If you can make

some favorable pictures, please visit 6
to Senor Don Enrique Ochoa,
(Adriana,) Sarabi,
Sonora, Mexico.

So at the San Felix Mine I experienced
so much kindness at the hands of the res-
ident proprietor, a gentleman from Chicago,
that I tried for a view of the house. (He
told me his friends had asked him for some
a pencil sketch of the house he lives in.)
If you can make anything of the photo
(No. 4,) please send 6 to

X Wm. S. Sturges, Esq., Tucson, Arizona.

I hope for some of these, because some
were exposed under a cloudy sky or towards
evening. One, No. 5, was with Trip. I was
on account of wind swaying the trees.

Well, I trust these will reach you
safely. And now I can go ahead for
views more intelligently.

Pingla.

from Baboquivari Mts, was not
scarce. So tell me if it is new, or any-
thing but *P. flexuosa*.

Then I found what I take to be
Althornia, a *Chilanthum*
which though looked like *Ch.*
lanuginosa, and another which
I hope is your *Ch. villosa*; if not
it must be *Ch. myriophyllum*, true,
as it has clustered rootstocks. Turn
specimens of this and one each of the
two former you will find in one of
the boxes of plants.

Now I will go on photographing with
better confidence, exposing for good
views and giving one or two seconds
longer time.

I do want to go back to the Santa
Ritas (main mountain) but it is al-
most June, and I ought to be north.

Address still Tucson (to be forwarded
if you please). Yours faithfully, C. G. Pringle.

Tucson, Arizona.

24, May, 1884.

Dear Mr. Sampson,

Coming in from a two
weeks trip to the Santa Ritas, I
found last evening your letter of
the 7th with props, and your card
of the 9th.

I am greatly pleased and
encouraged that you succeeded in
getting so good pictures from my
Mexican plates. I am delighted
with that of the Sasabi Custom House
and shall not fear to visit there
again. The white tower upon
is ruin; you will see it - ~~it~~ ^{it} had
come out on my plates now
and again. It is my home on
wheels.

I do want to travel again

in Sonora after the summer rains,
but it is doubtful if I do this year.
And as the San Felipe House is
more than 200 miles from here,
it is not likely I can try again.
So I will beg you to make a few
prints for Mr. Sturges; they will
at least be better than the pencil
sketch his friends asked him for.

What species is the giant cactus?
you ask. That is a question that
disturbs my mind much; and
tremblingly I hope it may be a
n. sp. I have asked Dr. Parry to
look it up. He will be calling
on you about these days, I trust,
and asking to be shown this
picture.

But what trouble I must
be making you. Now I have
25 plates, which are undertimed,
I fear. But I send them all

off to you in three boxes as before.
I will beg you to make two or three
prints of the two called "Sullivan
family" and "Sullivan House", if you
can get tolerable ones under mail to
Mrs. Wm. S. Sullivan, Tucson, Arizona,
and 6 to 12 prints of the Miners Camp
in the Santa Ritas and send to
J. V. Weigle, Tucson; Mr. W. was kind
to us and gave us beef, when our pro-
visions were about out.

About these mines in the foothills
of the Santa Ritas I found myself
amidst a rich flora, so I did
not get to the main mountains for
which I started.

I found the Noth. mine abundant
but collected but little as it was
mostly dry and I was under the
impression it was going under N.
decolorata, which I did not care to
put into my pots. The Pelletia sent

"in the common botanizing ground
of Arizona," as he wrote at first.

I am really sorry for him; and
have been not a little embarrassed
as I say.

Should Dr. Parry call on you
after you get this, I would be glad
to have him read it.

Well, I must get north soon.
But there is the fall flora, which
I have for three years longed to work
upon. And it has been Mr. Ste-
bens' plan to return to Cal. by Sept.
Then, if I go north, there is com-
mon and wife! Well. —

Yours faithfully,
C. G. Bingle.

Judson,

24, May, 1884.

Dear Mr. Davenport,

From the letter which
I just posted I left out these
memoranda slips.

I will speak of Will. Parish
at this opportunity. He made a
mistake, as he now sees, by going into
partnership with an ornithologist.
Mr. Hesperus is a man I much
admire; but his business keeps him
uncamped in a few places (chiefly
in railways) through the entire season.
Mr. Parish, having invested his funds
with him, must stay with him to get
his living; they are not able to buy
a team, or even a mule, with which
which the botanist can scour over
the country; and Mr. Parish is dis-

in mind, I really think incapacitated
for, certainly unsuited to working long
marches, so he lies in camp, as he
says, and looks longingly toward the
mountains so near and yet so far
away. He is thoroughly discouraged, not
to say demoralized, as a collector.
To make his case worse he is held on
ground which Lemmon and I have
worked quite thoroughly. The relations
between him and me have been
pleasant; I have twice taken him to
good fields, but he would scarcely
take anything on the last trip; had
given up making a distribution next
winter. It pains and embarrasses me
to find myself in his way. Since my sets
of 1881 were exhausted I have had
so many orders for them that I decided
to make 20 sets to run them as far
as possible. This I began last year
and had worked here more than

a month this spring before I knew of
his coming here. It had been courteous
for me to leave before for another field
as soon as I found him here, but my
former much impeded journey had given
me a slew of many good things (some
n. sp. which I had never succeeded
in getting into my sets) which I have
long been anxious to follow up, and
I have staid and done this with
good success, at the same time finding
other new or rare species and collecting
again my species of 1881 and 1882.
I have practically made my superior outfit
large specimens were ^{had} ~~had~~ ^{very} ~~very~~ ^{found} ~~found~~
and large ~~partridge~~ ^{partridge} I have headed
him off, while entertaining the kindest
feelings toward him, and really trying
to put him in the way of good things.
I must think he knew of my being
here, before he left home, and came
on with a purpose of competing with
me (in a friendly enough way to be sure)

FLORA OF THE PACIFIC SLOPE.

ARIZONA.

1884.

Cheilanthes myriophylla, Desv.
(True!)

Limestone ledges,

Santa Rita Mountains.

May 14.

C. G. PRINGLE.

L. Pringle

Sorry but I had my ticket
printed before you advised me
to have this Challenge.

I did not see this form on the
Baptist Union Mtg. It is struck
out on American lists in the
South River range, etc.

FLORA OF THE PACIFIC SLOPE.

ARIZONA.

1884.

Gilia inconspicua, Dough.

Baboquivera Mountains. in Arizona

Yuma Co., but close by the Mexican border.
and some 50 miles south west
from Tucson. April 9.

C. G. PRINGLE.

Domestic rain being well
begun, which will bring out rapidly
the autumn flora, with which I am
little acquainted I follow my own
inclinations and Dr. Gray's wishes,
and decide not to change over
this ~~season~~ season. So let me come
again and take a field view to me.

I have my new genus, — Pringlea
phylla, Gray, an acanthaceous
shrub to W. Sonora, modest and neat.

I have the most friendly letters
from Will Parish. He is badly broken
feels that he has lost the season, and
his brother's marriage practically
turns him homeless. They are kind to him
but he thinks best to leave them to their hap-
piness. Am glad my daughter (also how
little mine) is visiting you. Please have her
mineral water she is not yet - more than half
disinherited from the influence of her life-
mate, under which she has been reared.
I am anxious about your health.

Yours truly, C. L. Pringle

Tucson, Arizona.

18 July, 1884.

Dear Mr. Tarnport,

Back from a three
weeks trip among the Huachuca
and other mountains, I find with
pleasure your favor of June 28th
with proofs by which I see
that we have secured a few more
good photos; the two of my dear
Santa Rita Mts. I shall especially
cherish. I am annoyed about
the light streaks and lately
have been trying carefully to
avoid them. The excessive dry-
ness of this climate has caused
certain shrinking or warping
in some of my holders.

I have now used up more
than half of my plates, and

I put the camera into Dr. Parish's hands

and am exposing for plants, and trees making the landscape incidental as a background, unless I find some view or other object of especial interest. Should I want more plates toward the end of the season, they might come to me in these tin cases returned, might-they not?

On the Huachuca I got a good lot of *Aspl. monanthum*, and found a few plants of *Aspl. jaylandifolium*, growing a dozen fronds of 1883. *Pellaea marginata* I saw here and there coming up after its summer rest and looking much like *P. gracilis*. The fronds of last year were dead.

Into the box in which I send more plates I put a specimen of an *Asplenium*

(I got 20 specimens) to ask you if it is *A. Glehnii*. I at first took it for *A. parvum*. Also a small frond, broken up, of an *Aspl.* - which I strongly suspect, as with cold hills - mas, though, when gathering it, I was hoping I had got a *Karwinskiana*. I have over 40 good fronds of it.

I saw four dried up plants of *Polypodium tricholopis*.

I travelled widely over the mountains, exploring some canyons similar to Smuggler's North, and have concluded that some of Lemmon's finds were scarce there, and that he exhausted the plants as far as he could. Do you think he got many specimens of some of them. I have sent home for his account, that I may know whether I found his "Fern Album" canyon. I want to return a month or so later and secure complete ones.

Tueson,

7, August, 1884.

Dear Friend,

I start again this morning toward Louisa, Mr. Stephens, the ornithologist—accompanying, intending if we prosper and find grass and water (that country is now very dry) to be gone three weeks.

The letter promised by your last card does not come before I start.

Yours faithfully,

C. G. Fringh.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE

Mr. Geo. C. Thompson
8, Hamilton Place,
Boston, Mass.

Tucson, Arizona.

24. Sept., 1884.

Dear Mr. Farnport,

I am glad to infer from your letter of the 18th, that your health is better. and it is pleasing to hear of so good success with the last plates. The most of the large cactuses about San Felix are the strange one and not *C. giganteus*. Mr. Stephens with one of his plates secured near San Felix a tolerably good view of a magnificent specimen of the strange cactus. But I have a plate from which I hope you will get a better one. I have some 20 plates, which have been exposed, and would send them to you, only, as I am going right home, I think best to carry them in my bag.

I intend to go home as soon as I can dispose of my team and put away. My collections are packed ready for shipment.

When I wrote you last I was starting for the Huachuca Mts., planning to round up my season satisfactorily with a few more weeks of work. Finding 'good collecting,' I travelled slowly, and before we reached the mountains my man and I had both contracted malarial fever. He took to the bed and kept it, while I struggled to drive the disease and shake it off, and got back to Tucson. It was a terrible journey of three days in weakness and suffering, but three weeks in sixty miles and much of the road not travelled once a week. I barely held out to drive in. My next fever was dangerously high, 105°.

A good physician soon subdued the fever; but my strength is gone. I could not do much climbing in some time; and I don't want to rely any more on my half-invalid assistant. Fred is wanting my help at home; so I have decided to return, though I borrow not to have yet 400 species for my new set, and to leave certain ferns and grasses especially.

Recently I have received a kind and entertaining letter from Mr. Heferson, which I have not answered fully, because I have permitted the cares of this abundant autumn flora upon me to inslave me—

Look to hear from me in Charlotte next—

Yours faithfully,
C. G. Pringle.

Charlotte, Vermont.

11, Oct., 1884.

My dear Friend,

I take pleasure in
sending you by mail, (Reg.
Pk.) my amiraid. I shall
have in use for it this fall,
I think, open with thumb nail.

I also send with it my
ruby lantern to let you be
aware of my expense in
new glass inserted. This was
broken early in the season by
the carelessness of my man,
and I had to use a candle
concealed in a box with P.O.
power. I. looks more doubtful
about my visiting Boston, as
I shall not need to go to Can-
ada, and shall need to save
my dollar for another journey;
it may be to Mexico and why.
Yours faithfully,
C. G. Fingle.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. Geo. C. Champney,
8 Hamilton Place,
Boston,
Mass.

Charlotte, Vermont.

My dear Friend,

12, Dec., 1884.

I was surprised and delighted to receive
a beautiful album of photos. You have shown
excellent taste in arranging the views, and have the
names all right. I have looked for your promised
letter which mentions. I shall write soon to send
Stephens - 24, 25, 26, 27, 28, 29, 16 + 19 and for my wish -
and 1, 2, 6, 7, 8, 14, 21, 25, 27, 33, 35-36, 138.

My daughter has come like a good, lively girl to spend
the winter with us. I am enjoying myself as her business is
done up, and will leave the place of business to
her. So far all goes well for another journey. My
daughter will stay in the north. My daughter will stay in my
house. I shall stop the day at her place in my house.

12-13-21

MEMORANDUM.

To

Charlotte, Vermont, N. S. A., 27, Jan.,

1881-

Dear Mr. Sampson,

I had to hear you will send me plants for Replains and my assistant, so I can make it - I shall with them before leaving. If you have not sent to Sturgis his. Please send them to. I shall be waiting for the P.M. to hold until called for. Then when I hear you have done so I will write Sturgis: he may be in Chicago, and if he could get them back from Durson. But if you send all to me by express it will save you expense.

How I wish you might go out to see Mrs. Piper some Sunday (I believe she would be considerate) and take along a bundle of plants to show her. Can't you?
Yours truly C. E. Pringle

Charlotte, Vt.

21, Jan., 1885.

Dear Mr. Sampson,

Well, I am glad to know
that the Chilomeniscus parvulus
is solved. I hope it may be
C. scariosa, a name most
appropriate. It is at home
only on limestone ledges, in
driest situations where there
is "least soil" "short and rigid,"
as you note, (I had it some such
specimens to review them, and
make them unroll their fronds)
and in shaded places with more
earth or richer mould. "callos
and more lux. But it is all
one species; and I trust you will
have the courage to do as Watson
or Gray would do in another order.
I will for the nice prints on my
fronds. Yes, I must write Thwait's.
Yours faithfully,
C. H. Pringle.

Boston, Mass.

MEMORANDUM.

Charlotte, Vermont, U. S. A.,

6, Feb.,

1885.

Dear Mr. Tavenport—

Hurrying preparations for my journey, I think of a fresh supply of "dry plates", and send you \$15, begging you to order such as you think best (Carbutt's Special?) sent me by express. If there are more rapid than A + R's, will 2 send suffice where I used 4? And can we "stop" at all in drop shutter exposures?

Do tell me frankly; for I don't know. Ought not I to send you a sum of money to balance for what you have done for me. Or have you hopes of realising a little from the sale of pictures? And ought I to send my plates this year to some photographer

Sometimes I feel that I may be
abusing your goodness cruelly in asking
so much help from you. Unless you
hope it may yet be to your advantage,
do tell me, if I should not employ
a photographer. You have shown
your usual kindness and patience in
helping me to a start; but you must
not permit me to burden you too
long.

The Anroid is; do tell me the
cost of repairs to it, that I may repay
you. It was fortunate for me that you
sent for it, for I might not otherwise
have known it was out of order till
on my journey.

Prof. Sargent may call on you to
take some of our photos, since he has be-
come interested in them.

Yours faithfully,
C. G. Pringle.

Sept. to whom Mrs. Faxon proposed
me a letter. The country I wish
to travel is possessed by a tribe
of Indians, who regard him as
their friend and patron. They are
to be invited; and if I go under the
protection of his name, I shall, I
am told by Mr. Robinson, be perfectly
safe among them. I saw several of
them in his house today, one of them
was a governor of a village -

I have a letter of great value from
the Gov. of this State to the first mag-
istrates of principal villages. Being the
limit of the railroad, which is man-
aged chiefly with Americans, from Jackson Gross
to conductor, I find the Genl. Manager
letter to all employees gives me great
pleasure. I hope to move well advanced,
secure a good harvest, and return
in safety to my dear friends.

Are all bits of
the 4th Sp. string in
me. Perhaps, a
few more than
I have.

4

Chihuahua, Mexico
5, April, 1855-

My dear Mr. Davenport,

I was just on north from
home before I received a letter from
there; and was glad upon finding there
comes yours of March 21st more than
anxiously welcome. [Boston letters seem to
be sent via the City of Mexico in spite
of direction by 26 Dec., a route which
some days shorter, and pairs came through
under its 2 cent Stamp, though I believe
a 3 cent Stamp is required.] I am sure
you can not know the pleasure of
a letter from home or from a dear
friend until you get out a strange
Land. Mexico is a strange land -

I beg you not to be very anxious on my account. I have gotten over now the feeling I had on first coming into this new field and informing myself of its perils. Had I not been disappointed in many advantages and made so many friends, I doubtless I should never yielded to the impulse to leave home, which I got at times. It took me a good while to get hardened again to travelling and venturing, and I am happy that I can now tramp and blunder as well as ever. I will not conceal from you the fact of this being an unsafe country to leave and travel in; but I think I know now where the danger lies and can judiciously avoid going in its way. For the most part it comes from the miserably poor peons, who with knives and stones would kill a man

for a few dollars. The upper class of Mexicans as well as all Americans wear suspiciously a good pistol, and thus are comparatively safe from attacks of these wretches.

I am planning a long journey of some 500 miles along the base of the Sierra Madre and then over the south end of this State into their heart. For this journey I am negotiating with a fine old Spanish gentleman, who owns great estates in those regions, for an outfit of men and mules. He proposes to bind his faithful servant Martinez, a fellow of his who would not dare for his life or mine here has the power of life and death over his peons, to prove unfaithful to his trust. The gentleman, Señor don Francisco Canga is much (by marriage) of Mr. C. S. Robinson, son of a minister

At this season the plains and
valleys show little vegetation,
for it is the dry season. Whenever
I can get into mountain region
particularly if isolated, I pick out
a few species to gather.

Trilobites *Myriophylloides* is common
here on limestone ledges similar to those
of S. Arizona where I found it last year.
Neoth. sinuata ferruginea ^{*aschaboziana*} *Hosk. Grayi*
Chic. Linchman ^{*alabamensis*} *formicosa* I have
seen. I have found so far few new
things here. If I go down to El Paso
soon, I must send you a parcel.

I fear I shall not like travel by
on mule-back; but it is a wonderful
region I am to explore, and one
little ~~specimen~~ ^{specimen} as yet. It must be that
I shall get many choice things.

Do you have heard from Jones.
Love to Kate & Gustie with me

That only two of the 18 subscribers
in New Brunswick for him in large
held (so miserably delinquent were
his pecuniary) I thought perhaps he
had quit collecting. May I under-
stand that he is this year working
in Arizona (H. Wilson)?

Since Sumner and Burleigh
intend to visit the East upon the close
of the N. C. Expedition, you will
doubtless see them.

I have learned from A. R. Anderson
that Dr. J. J. Gould, through his
friend on March 10th, the day after my
arrival here.

Accept my kindest wishes, and
hope that I shall be able to do
my duty here and return safely
home. Yours faithfully,
O. S. Pringle

post being everywhere in Mexico,
on one of the latter (visited by me
in March) the people had died
of it during a recent month. I had
abruptly left a place in the heart
of the country upon its breaking out
there. I know it was common in
the city of Chihuahua; but, when
my friend died, I began to fear I
might linger there too long and
accordingly packed up quickly and
came away. I hope left my address
in through the Custom House
somewhere and next day be speaking
to my friends.

Risk, poor fare, etc., will soon
restore my strength. Monte, Mexico
is getting very dry. The rains expected
soon will bring up a new and
fine flora and will probably check
the contagion. Now I hope to go

El Paso, Texas,
14, June, 1855.

Dear Mr. Farnport,

I have been culpably
remiss in leaving you for a long
time in ignorance of my movements
and in doubt concerning my safety.

It is because since the first month
of my Mexican journey, ^{I have} too unsettled
to speak of my plans, and have
postponed writing from week to week,
in order that I might solve my perplex-
ities. This I have now done for the
present at least, and now can
definitely report concerning myself.

I am on my way home, I sus-
pect you will not grieve over the
fact, as I do. I am in some measure

acknowledged of myself for relinquish-
ing my undertaking, but the
friends I have made to you and
the rest of my friends to be careful
of myself but unnecessarily to
you now demands this step.

When I last wrote you I
was planning a long journey by
train, train through the Sierra
Nevada. About that time I was
surprised by an attack of malarial
fever, a return of the disease we
contracted in Arizona last fall. This
made me postpone my trip and
waited the progress of the disease
while I worked near the line of
the railroad, careful not to go
beyond the reach of medical aid,
if I should find myself unable to
check the fever by my medicinal
drugs to free him. The attack

came with some regularity increasing
in severity and burning out my
strength and courage more and
more. They were not so regular
that I could tell when to expect
them, and so they were very surprise-
ing when far from home in the
mountains. A terrible afternoon I
would then know of it, compelled
to drop myself at the train and get
home. For a day or two I would be
off again through weariness. I anticipated
being compelled to give up my work,
and attempted to accomplish as
much as possible before I should
get too weak. By the time my
strength got reduced so as to give out
at last, by a dear friend of mine
died of malarial fever in Philadelphia
he was a young missionary from
Vermont. I had known of small

26. Report all my bones and Mayan
upon plants, regarding these as of higher
consequence and expand liberally my
dry plates—

back for a few months after cold
summers! I think I ought to do it
with considerable safety. I have
learned much it helps me to live and
travel in Mexico. It is a wonderful
country in some respects, but what a
fine field for me!

The early summer season is not
the best time for ferns, nearly all
the time I was there they were dried
up almost beyond recognition, so they
are to be made very at fault. I have
them of four species known, for my next
distribution and have found them
other species unknown to me, since I
sent you fragments by letter. I should
you wish to see all forms of the an-
thology, and perhaps such as I send
with, intending to name in that time
to you all the time, and now I have
to report back in my hurried notes

up they went into my big boxes,
which must be several weeks in
the way, however.

I feel gratification over the
size of the collection secured. —
1750 species in fifty-five sets, and
many odd species of a few specimens
each, — in all 9000 or 10000 specimens
more. I never would be hard on
Mexico. Such vast areas but yield
at this season little or nothing. At
least no much hard climbing and after
long tramps to gather few specimens
a day. It will be even painful then
after the rains come; then will be the
time for grass, and a large collection
of Mexican grasses is a great object with
me. As yet I have only half a dozen
specimens for my sets. Leguminosae (near-
timate) predominate in my collection.

Reading this do you despair, and
fear I will cling to my information
for botanical collection as long as
life lasts? Well, what else am I good
for? What else can take the
place of this in my mind and
heart? It was a great thing
to explore Mexico, as I am in the
way to do, and I might manage to
last. Tell I could do it pretty well.

But I cannot bear to leave
my mother's heart and cause my
dear friends grief by such sacrifice
of myself. Else I should not have
be in any way home.

It may be two or three months
before I reach home, as I wish to
visit friends on my way.

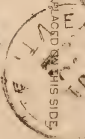

Saying to you, I am,

Yours faithfully,

C. L. Pringle. — over

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Wm. H. H.
Geo. E. Thompson,
8 Hamilton Place,
Boston, Mass.

Charlotte, Vermont.

27. July, 1855.

My dear Mr. Sargent,

Now having finished my
course of medicine, which I hope
to feel has cleansed me of malaria,
I am on the point of returning to
my work in Mexico. I feel re-
freshed by my rest - (it will be a
vacation of six weeks of the time I can
put back,) and think I can make
another trip in comparative safety. My
field is not a malarial country; I
am somewhat acquainted with its
real perils so as the better to keep
clear of them; my old room and
some good friends there are awaiting
me; good rains have now revived the

My boxes not having come home
and I am unable to send you
any specimens of furs, but you will
return them, I trust in two or three
weeks, as Mr. Horsford undertakes
to attend to this matter.

There is a *Nottholana*, which
you thought might be *H. nixa* from
the fig. in my letter; but with entire
plants in your hands you will see
that it is a species as near *H. Hookeri*
as it is near that species.

Then there is a very white fern
with lanceolate fronds, *Hemip. l. l.*,
and a *Gymnocarpium*.

vegetation; and I hope to find the
full flora more abundant than the
spring flora.

I don't expect to give up with
only half a loaf, and have with good
reason to secure before winter a collec-
tion that will meet the expectations
of my numerous patrons.

As I go back for plants, I have brought
back ~~with~~ Stake my camera; as I must
go on foot or on mule back chiefly, it
is a heavy incumbrance in addition
to my botanical burdens.

In Christmas last spring I
made a few exposures of plates, which
I beg you to receive by express, and
with them you will find some of this
vicinity. Please send a print quick
to Mr. ^{W. H. Johnson} ~~Johnson~~.
We can not write one over in a
while to Christmas?

Mine faithfully, C. G. Pringle.

Also I send a fine specimen of a
beautiful *Trichanthus*, green with brown
stripes, finely dissected, which I hope
finds its only spot, and enlarges your
plant-herb.

You had better to keep the money part
of this subject.

By the end of this month probably
if not sooner the rains will come and
most plants will diminish their growth
and stop off, so I will not be so
distant - still collecting, but post will
hardly come before Christmas. I have
told you how long we shall stay, some
of us much with no discouragement.

Whenver I am, however, I remain

Yours faithfully,

C. L. Seiple.

Chihuahua, Mexico.

9, Sept, 1862

Dear Mr. Sargent,

I write you after a beautiful
work here during which time we have
secured some 400 specimens. All goes
well as far. No more fear yet. It is
a pleasure to be well and strong
and ambitious, and to live in this
glorious climate and collect the rich
flora. I am grateful and glad -
from the July heat of Mexico to the
heat of a Mexican August tempered
in this high altitude by cool breezes.
The change was most rest for me -
Almost daily showers, which relieve
but for a while, while the drought of
this region seems bent to keep the

air fresh. The amount of rain that
has already fallen this season has been
unprecedented in many years in your
or last year in Arizona. My visit
is well timed. The rockiest hills are
covered with a rich vegetation. I
went out to gather everything desirable
in the vicinity of our future camp
for tea. I have been kept intensely busy
and am not yet near the end, but
I have 70 species in my portfolio.

I enjoyed in the collection and
in the midst of my visit home. I
was a great disappointment. While I
was away in May was the month that
I have got to see the first of rain
which stopped me. There would have
been no growth but the rain began to
and I got to see not a day of the season.

Accept my thanks for report on
Mexican (& Yucatan) birds and plants
as arranged in more success. I hear
of August 4th.

Do see that I was partially success-
ful with my camera. I got out with
a little of my old enthusiasm, and
made an order to get my soldiers and
go out after the strange birds of the country.
But these fine people had ^{you} seen me
in such a way as to make ^{me} suspicious
of anything which I might do out of
the field for a single day.

I trust on this you have received
from me the few furs of my first
journey. Now that the rains have stopped
the game nearly, I am here a small one
which I have brought with me. I
thought you had not yet got *Montezuma* nor yet *Montezuma*. I had
a specimen, the white one. It is now gone &
few others besides.

is unlike what I distributed
last year (St. Catalina May, 1888)
that I might put it into Oct-?

You were right in your con-
jecture that Fred sent off by mis-
take all my stock of *Chilomenes*
Encyopoda; I am glad you can
return the bundle -

All right to send to Cambridge
and New; but both have my full
Set.

During the last few days of my
stay in Tlaximallan I exposed and
to plates, to get strange Mex. views,
chiefly; and I can shortly dispatch
to you the plates.

When I get my tickets printed, I
shall want to send those which belong
with the specimens.

Yours faithfully,

Pingree -

Charlotte, Wisconsin -
23, Nov., 1888 -

Dear Mr. Davenport,

Arrived home on
Saturday evening in excellent
health. I am looking back
upon a most delightful and
most successful journey, re-
membering with a thrill of glad-
ness the bright skies* and the
interesting flora of Mexico, and
am looking forward with fond
anticipations to a season in my
herbarium and to pleasant
converse with my friends, of
which you are one of the dearest.

* I have not seen the sun since I came
home.

In haste to get names of my plants for the printer, I have sent you today by mail the ferns of this last journey.

If I mistake not 406 is one of your "orders" of last winter. I found only one station and that yielded but 13 specimens. I sometimes regretted (almost) that I found that station, so many miles I travelled the steep rocky hills of Chihuahua searching their cliffs in vain for more. The clump was growing from black mould which had accumulated in a fissure of a cliff about a foot wide and was sheltered from direct access of rain and sunshine by a projection of rock near the upper part of the fissure. I never found another place just-like it, but

am confident that there is a plenty of the fern hidden amongst the score of miles of cliffs, which render difficult of access the summit of the mountains within view from the City of Guimaraes. More Smuggler's Notch can be matched twenty times over, and yet that is only the plateau region of Mexico. A journey of 150 miles to the west, which must be made on mule-back for half of the way, brings one amongst the Sierra Madre—

What was VI which Mr. Stanford sent you?

455, woodsin. Is it W. Mexicana? I did not get enough for sets.

Last year I must have sent you a specimen of a woodsin from Santa Rita Mts.; was it W. Mex.?

453 and 454. Is either of these

near Chelmsford, was related to
anything I had met with elsewhere,
certainly not to the Robertson.

Leucopoda, with ~~very~~ stripes
with only ~~moderate~~ ^{very} ~~moderate~~
so common about ~~central~~ limestone

hedges of the Santa Catalina Mts., and
not seen in the hills mentioned. Although
you had made a great mistake that time,
and searched the two plants carefully
wherever I went with to them. I soon went
to give up that the little one was a
distinct species. Still I believed it
a good variety, till near a end of the little

one, and growing strong and pure in
the full sunlight - I at last came
upon a single plant, of which I sent
you a pressed. And by this caused me
to think that I might be mistaken; and
when I reached home, and ~~found~~^{saw} that the
Eucalyptus described as viscid indeed was
found in quantity, so. Don't let the peculiar
appearance of the specimens cause you

after the fronds of the year have
fully formed under the favorable
conditions of the rainy season, and
when their sori are maturing, their
rachis elongates along the surface of
the soil, roots at the tip and sends
up new lateral fronds the true fronds
of the next year. The filiform extremity
of the rachis, for a while a connection
between the young plant and old,
usually decays early the next year.
It was for this reason that I long
failed to notice the ~~proper~~ previous
habit of the plant, and that few
of my specimens, gathered in October,
show more than the rudiments of the
plantlet.

But why is not this plant—as
far removed from *A. Trichomanes*,
as *A. patens* is from *A. abnorme*?
Notice the oblong pinnæ, more

distinctly auriculate and acutely
dentate and sori confluent at
maturity. Yet, if Prof. Eaton and
yourself judge it to be only a variety
of *Asplen. Trichomanes*, I am con-
vinced enough and leave a decision
enough in your judgment to establish
fully.

456. *Adiantum tricholepis* (?)

Yes, you shall have the specimens
you ask for I devote my limited
material to such as you and Prof.
Eaton and Mr. Faxon, etc. The plant
seen by me ^{very} locally caespitose like
many grasses, — the rootstocks branch-
ing below and easily separable.

457. I was surprised, when you called
this *Chilotrichum leucopoda*, for it had
not occurred to me this delicate
little viscid glandular fern found only
in cold shade of cliffs of the range.

negatives of this view I leave by you
to make 6-12 of each for them

Yours faithfully

E. G. Pringle.

cause, as to water in your fine
judgment. 459 is only another
state of 448 (of which the whole stock
was not in) which strangely restricts
itself to cold shaded and mossy
rocks of a certain range of the
hills.

I do hope you will be able to get a
good many fine photographs from my
plates. Without any experience with
such stops upon Cramer's plates it
pains me, I risked little in that di-
rection; but depended upon the drop-
in water without rubber bands to bring
it down quicker, than it would natu-
rally fall. A number of exposures were
made to please my Robinson friends, from
whom I had so many rides on their
narrow-gage railroad up to the mines
of the Santa Sabina Mt. and other
valuable assistance. If you can find

Charlotte, Vermont.

8, Dec., 1885-

My dear friend,

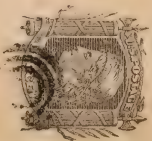

Your hopefulness about
the state makes me light-
hearted.

And then I am confident
you will see justice done in
the Little Republic.

As for the white Northolana,
I am sure that Prof. Paton,
had he with me when it grew
on the Santa Catalina Mts,
where N. nivea was abundant,
in many situations, some not
very unlike that in which this
grew (the face and verge of dry cal-
careous cliffs and cliffs, and
even it always in varying in char-
acter, with no tendency of N. nivea
to cross by it, to approach it in
appearance, would never have
thought of putting it under that sp.
I am sure you would be
able to see this more than N. P.
as Paton was no fool, & of.

we have just received
of "Baptist" Mission for Mr
Charlotte, Vermont,
U. S. A.

My dear friend, 23, Dec 1885.

And now thanks for your interesting letter about photographs. Am mortified about the ~~slide~~ ^{slide}. Without your position proof could hardly have believed that I failed twice to draw the slide!

Glad you find a good picture of Mrs. Holmes in dining cars. I want to please the good lady who fed us so well; so I lay you 10 and on 6 or 8 extra copies of the picture.

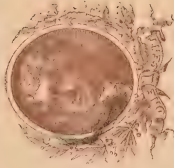

So the men are giving you glimpses of Mex. life? The man is a easy fellow and very amiable to deal; so be gay about us city wrapped in his great blanket (serape) unless the weather is hot. Notice that the outer end of the long blanket is always thrown over the left shoulder. And the "strange projections" are water-spirits to carry the rain of the earth or connected roofs. But you will find lots of donkeys! Truly, C. G. Pringle.

6. Jan., 1886.

My dear friend,

Oh, dear! how I kept
your plant to Mr. Bates in May so
long? When he asked for a specimen of
the *Asplenium* in particular I could
none. I had just to tell you in a letter
(or should) which must have passed you
regardless in the way, that I would explain

my question (if you can) - I have the
very same but not yet here, nor on
the road as yet, nor from the railroad. I
had been from the road. But I shall
my specimen to get enough to show the
character of the plant. As the same will
show a good specimen of it I will
do this.

Good for the plant! The specimen
which you say. Then the *Asplenium* must have
varied; for the leaf was always the same,
and always felt naturally with a slender
spring - (your) father's.

Yours,

Charlotte, Vermont.
22, Jan., 1886.

My dear friend,

By mail I send you a parcel of ferns, such as you were inclined to desire to have from me. Will send tickets, when time comes from the printer.

I am interested in your efforts to get the two or three strange ferns on the right footing; in you (and Calvin) you will prevail.

Dr. Gray prefers that I go now far beyond the ground I occupied last season except to explore the Sierra Madre of Chihuahua. There I hope to meet with the great forest by Comanche in the Arizonicus.

Do you think it possible for me to get a new fern next season? I don't know.

I have agreed to see the Mexicans and we have been making ferns my plan. Do you think some of them would like to pay for materials? But what do you get for it?

So -

Yours faithfully,

C. G. PRINGLE.

Charlotte, Vermont

23, Jan., 1876.

Dear Mr. Tavenport,

The views have
come and have given me much
pleasure. Some are beautiful.
I think it is the morning exposures
which you found underlined. For
that hour I might use to advantage,
I am thinking, a shutter with an
opening twice the length of this one.
I think I can make such an one
out of pasteboard or cigar-box
stuff. The opening in this one I am
going to enlarge as advised by you.

I see that the larger part of
these views are of personal rather
than general interest, and therefore

not salable. But it is no small
thing - please the people who gave
me so many fine ideas to the mount-
ains; and I am glad to see that
the most of the exposures made
on their account come out good.
On the enclosed slip, I indicate the
numbers of copies of a few more
views, which I beg you to make
for them, also those of which I would
like a copy for my assistant.

There are 7 negatives which I hope
you will look up, - 8", 20, 34, 32, 23,
the inscription on in which appears (in
white thread of a dark or under?),
and that one of boy (the Robinson
hair,) which shows a Mexican by
the name lighting his cigarette.

I have 4 neg. Keystone and 12 B & B.
plates left. will want a few more in
good time.

I received last evening a note
from Mrs. Piper informing that she
was not able to leave the house
the past summer, and was pine-
ing in the woods and fields. I say pine-
ing because I have not been heard from for years. Can't you
anyhow spend a day with her? I
fear we shall not long have her
with us. I often think I would like
to visit Boston to see her, and you,
and Dr. Gray, and the Fargos; but
it would take a week from my
collecting time and much money
which I need to my work.

Yours faithfully,
C. G. Pringle.

PRINGLE & HORSFORD,

CHOICE NOVELTIES.

NORTH AMERICAN
PLANTS AND SEEDS.

Charlotte, Vermont,
U. S. A.

My dear friend 11, Feb., 1886.

I am certain that the
fronds of 448 Pellaea are
"annual", getting their growth,
fruiting, and dying down, all
within a few months. I can't
just say that all "die down
during winter", for that country
is so different from ours; but it
amounts to that; for fronds
brought up by fall rains
may survive a frostless
winter and fruit early, but
surely will surely die down after.

The fronds of the old fashioned
P. cordata are biennial and
fruit the spring after making
their growth like all Pellaea
of similar firm texture.

441 grows 6 to 8 inches high
Your faithful Pringle.

12. Nov., 1886.

My dear friend,

Thanks for the reading of
this letter.

Mr. Baker probably means "1383"
1383, which is (as I have it from
Palmer,) the same as my 441.

~~Barry & Palmer (or is it Palmer's)~~
1391. I know nothing about.

How strange anyone should
ask of the two fellows

If you have not sent Mr. Baker
complete plants, we will have them
my Oct 15 to send in a few
weeks through Dr. Gray.

Yes, I saw your elegant plant
to Dr. Gray, did not know you wrote to

will in verse!

Am now buried in dis-
tribution -

Yours truly,
O. J. Ring.

Charlotte, Vermont.

15th May, 1886.

My Dear friend,

I have to answer your card to Mr. Forbush who is away on his wedding journey.

It was I who sent—the box of plates. I did not have time to accompany them with a letter, and have not found an opportunity to write till this morning.

I have been at home three weeks. I brought back, as you must have found, a few exposed plates. Before sending them I wanted to add to them a few exposed at my cousin Clark's (long promised) and this took some two weeks. So you got no letter from me.

You can appreciate my desire to make
no noise about my being at home. I had
to write to Cambridge and to Washington.

You were anxious about me, because you
did not hear from me. Then you must
have written to Chihuahua, though I
looked in vain for a letter from you
from the time of my arrival there.

This is why I returned so soon;—

I found the hotlands of Mexico rainless
since last October, and almost no vegetation
starting. Last year there were good showers
during winter and spring; and here and
there I could find enough to repay my toil,
not so this year. Then on the tenth day I
was attacked with fever more severe than
ever before. So I deemed it prudent to
come home to recuperate and wait for
the midsummer rains.

I am nearly well again. Yesterday I
walked twenty miles without fatigue.

As I am planning to return very soon. Perhaps I shall stop for a month in N. Colorado. Probably I shall go for two weeks to the Mts. of Arizona to further my cult. - To the Huachuacas, I think, this time to find "Concepcion Canon."

Next it is my desire, strengthened by that of Dr. Gray, to visit the Sacramento Mts., of S. W. New Mexico. Then of August 1st to be in Chihuahua preparing to know the Sierra Madre, where some rain is sure to fall in the dryest of years.

Before I go back you will kindly show me the results of these last plates.

If either of the views of Rev. Mr. Sutton's garden, etc., comes out good I shall want a dozen photos of it; and if either of those of Rev. Mr. Sutton's grave makes a good negative, I will be six. The latter was a dear friend of mine, and the former proves a kind one.

Of last year's photos Mr. Faby wants
6 more of his family group before
his "Tienda Parata", 2 of the silver
mill and 2 of the ore train.

Not since 1880 have I seen May in
Vermont. What verdure everywhere,
and how soft and fragrant the air!

You will need to tell me once again
about the ferns sent to Mr. Baker.

Now I am eager to hear from you.

Yours faithfully,

C. G. Pringle.

I have bought Dr. Palmer's *Chilomena*
plants. Is this fern rightly named *Nottholciana*
Acumborniana? The only other species strange
to me is *Pellaea Semmersonii*, which is similar
to *P. aspera* except that it is anther.

Charlotte, Vermont.

7. June, 1886.

My dear friend,

Your letter of the 3rd is before me, and the photographs came to hand Saturday evening. I am pained and troubled to learn that your health is miserable. Are you not planning a rest? I wish you could come to Vermont for a few weeks; and I have been thinking you might bring a lot of plates and go about photographing Vermont houses, etc., and thus make money enough to pay the expenses of your trip, ^{quite} ~~and~~ as much, (I should think,) as though you staid at home. I think the life would repair your strength; and I believe

you might do quite a little business, if you could offer photos for about \$2.50 per 12.

If I were to be at home I should urge this course. Yes, I am bound to make a good collection yet this season, and hope to start out soon. I find I can walk 20 miles a day without much fatigue, am quite over my fever, and soon rain will bring up vegetation in the S.W. Don't be anxious about my fever; I can manage that; would not have come home for that alone; the drought was excessive, and having passed back the temptation to improve the time here was too much to resist. I want somebody to kill off Geronimo and his God Apaches so I can go again to the Quachmans for a lot of Lily bulbs, etc.

I divide with you my stock of Noth.
Pringlei, Savannahport, - grateful to see our
names again so closely coupled, though
I can hardly understand how it is not
Palmeri since that gentleman first brought
home the plant. Of course, however, that
is not an inspirative reason. I don't
know as I can give any further informa-
tion than the specimens afford, except
concerning its habitat. I found it among
the Santa Lucía Mts. a dozen miles east
of the city of Chihuahua, growing from
bluing lime rock about cliffs and in
the banks of gulches. These last especially
often presented the appearance of heaps of
refuse from lime kilns. ~~And~~ In such meagre
soil the fern has a foothold, and during
the greater part of the year is as dry and
white as the soil in which it stands.

I am glad to see the few new Chihuahua
views come out so well; and my cousins

Clark are immensely pleased with the pictures of their home and pet-horses.

Will you please print and send to

Geo. A. Clark, E. Charlotte, Vt. the following?—

View of house which shows back door
from the best-plate (I think
there are two plates) . . . — 10

View of house from highway in which
the horse stands erect and still . . . 10

View of man with horse, from the
plate showing the more distant view . . . 12

[The closer view seems not well framed]

View of mother and children
with their horse . . . — 12

Also (to come in same pkg) one copy each of
the two views of my Chittenden home and
one of the goats for my good assistant—

and please drop post-card to Mr. Clark
when you send pkg. I send \$5. to pay—

Yours faithfully, C. G. Pringle.

H

Charlotte, Vermont

13, July, 1886

Dear Mr. Savenport,

In two days I shall, I expect, be off again for Mexico. No need to say much on this subject; you know my long-cherished purpose to explore the Sierra Madre of North Mexico, and how I have as yet fallen short of my promise — The Apaches are this year on the further side from Chihuahua, some 300 miles away. The Mexican Indians are good — I trust to find friendly Americans here and there, where I travel.

By express I send you a box of exposed plates. Please send results (say one print each) to F. H. Hartford, Charlotte,

and, if my friends are pleased, they will
order numbers. I am apprehensive that
you do not charge them enough in the
ten cents at which you began. My mother
has never consented to sit for a likeness,
and I was so anxious to secure one
when she proposed to stand by the horses,
that I made five exposures.

Fred wanted me to photograph some
cereals, but I could not get near enough
with my lens to make large pictures.
There must be lenses for such things in
life size.

I had to pay 150 per cent duties on
the plates I took last spring. So I thought
of the paper invention which might in
my silence escape the notice of custom
house officials. Have you tried it yet?

May I not hope to hear from you in
Chihuahua? Yours faithfully,

E. G. Pringle

Charlotte, Vermont.
8. August, 1886.

Dear Mr. Savenport,

I have now been at home a few days. Within a few days after my arrival in Chilmacina I felt-compelled to return to bring home a sick assistant, who sickened on the bad water and other unfavorable conditions of that terrible country, and could not, I believed, safely remain there, nor be safely sent home by himself.

I was not aware of the serious aspect of the border troubles until I was north of the Rio Grande. Now, being on the safe side of that river, I am trying to restrain my impatience to get back to

my work, until I can hear of the
international troubles being settled.

But I feel dreadfully undone by
this last tedious journey. I feel out-of-place
even at home, and believe I shall be most
discontented, if compelled to remain here
through the season. Vegetation was starting
tolerably well though later than last year.
It has been my purpose to return, even
if, owing to the depleted state of my funds,
I have to go alone.

I have not wished to inform my
correspondents of my return; but this letter
is due you by reason of the friendship that
exists between us and the gratitude I feel
towards you for the comfort afforded me during
these melancholy days by your Form Notes
in Torrey Bulletin just-at-hand.

Miss Fred hands me your much-prized
present of a framed copy of Hortensia Bispia

and eight of my photographs. I am
glad to see that some of them come out
satisfactorily. Miss Geo. W. Prindle and
his wife are delighted with the likeness
of their babies as No. 5 shows; and Miss
Jennie, his wife declares the likeness of
George in the same picture the best he
has ever had taken. He will write you for
copies.

I presume you sent only a part of
the proofs, in I trust all the remainder
were not spoiled.

I may be ^{starting} back to Mexico before the
end of this week. Don't be very anxious
about me, if I go again. The revolutions
are in other states than Chihuahua; and
the international troubles must soon be
amicably arranged, I believe.

Yours faithfully,

L. G. Pringle.

Chilimalana.

19. Sept., 1886.

Dear Mr. Farnsworth,

I received the other day to read your kind letter of August 24th forwarded to me here on Frid. I presume that he in writing you informed you of my sitting out the third time for Mexico and of my good assistant of last year bearing me company.

We have been here three weeks, and are having fair success, though vegetation is only about half as vigorous as last year. It is very different as respects species and their behavior. In the U.S. every plant flowers year by year near a certain date; here everything depends upon the

rains, which are as fickle as fortune.

The other day we went by train to Madula a bare bone station on the plain fourteen miles to the south; thence a walk of three hours brought us to the highest peak of the Santa Catalina Mts., a vast chaos of pinnacles and cliffs, which I hardly reached at the close of last season, but did not explore. This time we were able to spend some three hours there before returning to the evening train home; and on the north walls of the great peak I found two ferns not collected by me before. Here I send bits for name. The *Philanthus* seems not to agree with my recollection of *C. lewisiana*.

Geronimo now being captive it is hoped, that the terrible Apache scourge inflicted on these regions since their earliest settlement (time has come when it was unsafe for Mexicans to go a mile beyond the limits of this city,) is at an end; if so, there is

a rich and vast region opened to exploration; and I hope following years will compensate for the disappointment and losses of this.

From the inhabitants of northern and western Chihuahua there is little danger. Hundreds of Americans are travelling and living in the region in safety.

There is much fever here both typhoid and malarial; so we have to exercise care.

Only a few weeks remain till the close of the season. Still planning a trip to the Sierra Madre, the poor Mexican fare about the ~~the~~ only Coyote now; if I go, I aim for a wonderful canyon and its ferns.

Glad you had a good vacation. Yes, our-door life would be the thing for you. Can it be planned?

Hoping to get a letter again soon while here, I remain, Yours faithfully,

C. G. Pringle.

Charlotte, Vermont.

6, Dec., 1886.

My dear Mr. Farnsworth,

Once more it is my great
privilege to write you some lines at the
^{happy} end of another Mexican journey, and
to send you a few rare birds. In this
journey everything went well. As I rode
through mountains through the warm
golden days of autumn and gathered
strange plants I was supremely happy.
I have never had better health or been
capable of so much toil. I have gathered
material for another distribution, if a
small one, - 125 species for sets and enough
birds to make some 10,000 specimens.

I trust it is a good omen for another
year.

I have sent you all my ferns, and
trust you will find me or two of unusual
interest - in this lot, at least.

Not another station found for *Antennaria*
tricholepis! It surely is rare about Pichu-
hua. But in the wonderful cañons of the
Conejos and the Rio Grande shall yet
be found any quantity of it. I am con-
fident.

I looked over the collection of a missionary
friend, (Rev. Mr. Crawford) made at Guad-
-alajara, where Sr. Primer went last
July, some I knew, some others of which I
secured bits for you, not so.

I hope soon to hear from you, and to be
informed that you are in better health than
when you addressed me at Pichuhua.

And please tell me how much I am in your debt
for photo. work done this year. I left my camera
at home this last time. Yours with truly,

C. E. Pringle.

Charlotte, Vermont
30, Nov., 1887.

My dear Mr. Favenport,

Once more I am safely
home from botanical travel; and
I want to hear how it fares with
you.

I send you the few forms of this
year's collection. I don't know as I
saw about the Sierra Madre the strange
Chilanthus of 1886.

I have had a hard year, and
have got badly into debt. My spring
trip was a sad failure. My assistant
fell sick before the end of the journey
out; and, after spending considerable
time and money doctoring him, I had
to send him north. He was a ~~man~~ man,
and could not stand the winter
and climate. There is no telling

case. I took this fellow as a healthy, healthy farmer's son. Next I sent him for my assistant of several previous trips: but soon after his joining me I was attacked by fever more severely than ever before. No rain nor snow had fallen throughout the winter; scarcely any vegetation had started, and the country was getting dryer and hotter under the summer sun. I came home to change myself & fever. I had wanted \$600 or \$700. I was now in spirits. I did not want botanists to know of my retreat. I wanted to write you, however, but feared if I should do so, you might be questioned.

Toward the end of August I was travelling back to the mountains 160 miles west of Chihuahua, again well and no paper, and with a good assistant and a fine outfit of weapons, mules, tent, saddles, etc. We camped for six weeks at the foot of mountains nearly 10000

feet high, among pine trees and beside a mountain brook clear and pure. I found myself surrounded by a strange and rich flora, and worked to my utmost to gather everything and make up for the disasters of the spring-time. Everything went well, the autumn weather was glorious, and I was supremely happy and secured a fine collection. Frost and cold winds by the end of October drove us away to lower and warmer regions.

Now as usual I have a distribution to make and numerous works to do. But my first-care is to pay my debts. In this matter St. Gray is as kind as a father.

I have a dozen or more photo. plates exposed before me, etc.; can I place or arrange them, or would it be troubling you?

Anxious to hear from you again and
Faithfully yours,
E. G. Pringle.

Letter and parcel sent to Medford P.C.
Tringli.

Mr. Geo. W. Chapman,

1 Charlotte, 16 Dec. 1887.
My dear friend,

It is a relief to hear that you
are feeling better; and I am glad
that I may send the photo. plates. Since
I have accepted a series of
articles in the *Journal of the American
Society for the Improvement of the Race*. I
feel sure that the plates will be
crushed under in my eyes; for they
are very interesting illustrations. I have
been thinking of them for some time; but
for I have been too busy with a year or
so of lab. and a number of them are
"faded" in the lab. and I
was in a hurry to get them from the
lab. I am sure that first it was per-
fectly dark.

Hand. 12 of them are piled together
near the top of box? Or, if you find
them, please send them to Prof.
S. Brookline; my address is
for which I am very much obliged.

Mr. Brooks's labors afford me
much hope that Dear Dr. Henry can be
cured. I am I hope your director. I
which way to turn. Mrs. Piper
was 88 when Dr. Henry was put under
her hands and returned for a long time
of recovery. I am, I hope, your friend,
F. J. M.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. C. Tavenport,
8, Hamilton Place,
Boston.

Mass.

14 Charlotte, Vermont.
22 Dec., 1887.
Dear Friend

Your long and interesting
letter came last evening.

Oh no! I have no use at-
present for the stereoscopic
camera. Keep them longer.

It's trouble about the Cactus
plants, going to Rochester, I pre-
sume. Possibly I may
want you to write about
such plants.

Citrus Mexicana were a
good name.

From the first I have regarded
the Citrus as a very variable
and undistinguished species.

Will wait for the form names till
you are certain.

Good news about our
good friend, Let's hope!

Yours truly,

O. G. Pringle.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. C. Cavenpoint,
8, Hamilton Place,
Boston, Mass.

1
Charlotte, Vermont.

11, Jan., 1888.

Dear Mr. Javenport,

First, thanks for the names of the ferns.

Then: yes, "it is hard luck". But it is only a little part of the calamities of the spring-time following me up. When driven from my field last spring by drought and fever, I sold to an American photographer in Chicomulco the four dozen fresh plates which I took from Boston last-winter. He would not buy them being afraid they were spoiled by age. I have no doubt that the trouble is all with the plates, and now I just ~~want~~ to throw them away and not bother you any more with them. I was

not anxious to have them come out
all - not so anxious - till Prof.
Sargent asked me to write these
articles and said my photographs
would be just the thing for illustrations.
I have been anxious to please him
wishing to make a little return for
his kindness, and hoping he might
still want me in Mexico.

I don't want him to see these,
lest he think I can do no better in
future. Perhaps, however, Mr. Charles
Faxon can manage the matter, and get
yet two or three good figures - So, I would
beg you to send those you speak of; and
please add two or three mountain views
of the camp scene. I am glad that
can serve as a memento of that happy
camp. Well, if you will fix up as well
as possible a few of the best forest
views, I will venture to slip them
amongst the articles with an explanation.

Will you not keep the stereoscopic
lenses as a return for the trouble I have
made you in this matter?

I am toiling and struggling to get
back into my feet again - to recover
the losses of last spring and my in-
firmities. I could make another
journey, and have a good season, I might
do that - If not and I should fail
in the attempt, little matter; for there
is little happiness for me in Vera
or little prospect of any.

Well, well! I try to bear it cheer-
fully, and to keep from sitting into a mor-
tified and desperate state of mind.

Yours faithfully,
C. G. Pringle.

on yellow and at P. M.
My friend came go to the country
with my satisfaction.

It was the St. Louis photo which I
sent to you. I am sure I shall
be pleased to see

I shall be very glad of a few (two or
three at least) bromide prints of the camp.
I want to send one to my good mother,
the camp with the sleeping place.

If you should judge that you could
not reproduce better from the same plates,
that would be fine too.

Most earnestly do I hope looking
my recovery. I have expected to
I would think for two. And I am
inclined to think it might help me
in coming to know him better.

To have next that you are
nearly well again, I am sure

Yours faithfully,
A. G. I.

Charlotte, Vermont.

18, Jan., 1888.

My dear friend,

First "take chance" in
respects your health, else you may
have to go into the sick list for good;
and, if a few more of my Boston
botanical friends get disabled, I shall
have fought and changed my position.

I was striving so hard to pay
my debt to Prof. Sargent and please
him by my writing, that it did not
come blue, for a little while, to see
myself likely to fail in this relation.
And during that little while I wrote
you my melancholy letter. No, don't
be anxious about me. Time has been
when you might have been; but which
I have health and the freedom of

the fields, I ought to find something
to live for.

I am glad to hear that you find
837 so interesting. It was growing in a
peculiar place - the verge of a high
cliff under the summit of Peters Peak
(Pico de Potosi) nearly miles south
west from Chihuahua and forming a
climax with *Silaginella rupestris* etc.

Prof. L. M. Underwood has written
me for a selection of ferns. I never
have supplied him before. He says he
has had no Chinese ferns and 80 pairs
of Mexican ones from Strafford. I judge
he has, then, a lovely collection!

On res. Dr. Watson never makes
much ado about my collection. I
suppose he has to publish two or three
reports to please Palmer; but I am
told by Dr. Perry that they are valued
highly and his Palmer fits all the
curious things over and over and

much so. Watson reports them interesting,
and this will be a big list. I am
not forgetting that we get a new
new and new species. But such is the
collection! I have bought 1000
collections of \$100 and can make a
new one a small proportion.

Well, if you have a good chance
you might get it. I have the same
question you have asked me; but I think
it will be better than each one provided
separately. Dr. Underwood is my coll.
to me. I suppose, Prof. Underwood
now Gramine, and Mr. Perry has
in his two or three. Every a few days and he

I have seriously contemplated joining
in Dr. Underwood's; but some of my
other Cal. friends don't believe it.

Dr. Perry and wife are wintering in
San Francisco. Gramine has broken
with the Cal. Acad. of Sciences (Palmer
for me) and I regard him as a man

Charlotte, Vermont.

5th May, 1888.

My dear Friend,

I am not yet gone, as
you can see; am waiting for last papers
and papers to come through Prof. Burgess.

Now I wish you would contribute
five articles to 'Garden and Forest'.
You could photograph your specimens
for illustration, and see them reproduced
beautifully. And I suppose you would
be liberally paid.

do you see the journal and notice
some of our photos, reproduced by some
process which preserves the beauty of
the photographs?

I am wishing I might have
a lens by which I could take

pictures of flowers and small plants
somewhere near life size. How did you
take the painted photographs of Phil-
anthus Mexicana, for instance? I can't
focus my lens so near. I am wishing
this, because I am hoping to secure this
year a great many illustrations for the
Garden and Forest, which I have some
to admire much.

I may set out any day. Thanks
for your advice to call on Mr. Cramer
which I am planning to adopt—

Yours faithfully,

C. G. Pringle.

Tomorrow I am to become fifty years old!

Charlotte, Vermont.

11, May, 1885.

Dear friend,

Thanks for your letter and
postcard. Last evening I went again
for Prof. Hayes, and am expecting
to start on Monday.

Will now try to leave the
collodion plates.

No I can't manage my own
natural size views of small things;
and are much reduced. It would
be a good thing to have a Bellows
box; but \$7.50 is too much money for
me to spare this year.

This is a fond Bye from

Yours faithfully,

Next address

Chickadee.

C. G. Pringle.

Charlotte, Vermont.

12, May, 1888.

Dear Mr. Sampson,

I wrote too hurriedly yesterday.
I could never think of receiving back
your lens.

Last evening came a letter from
Miss Turbish; she regrets that she
cannot see how I look — that I
did not show myself in the view
of a Mesquite Forest in Garden and
Forest; says a friend of hers takes him-
self in his pictures by means of a string.

Continually asking something of you, my
tired friend; but sometimes you might
like to please two of your friends by
printing two or three photos and sending
15 her, — say "Left on the bench", Jas-

virion scholars" or "Queen's circle".

Miss F. and I have renewed our correspondence, and are getting more than ever before interested in each other. She is wishing herself young again but she may be a hundred strength; I feel like wishing ourselves both younger for other reasons - don't tell!

She tells me that you have visited her home.

I told you next to address Chisholm - for a week or two, then next (probably) Monterey.

I hope you will be able to take a good vacation this summer and get rested.

Yours faithfully,
C. G. Pringle.

H

I

Chilpancingo.

1. June, 1866.

Dear Mr. Lecompt.

Postage to Mexico from N.S. only 2 cents now.

Here I am again
with assistance because of so many
Mexican journeys, and tomorrow
expect to start for Montezuma.
My hope is to finish the Mexican
word in that region in four or
five weeks, and then make a
short visit to Guadalupe
for penicillin - you will
now many Palms from there
in 1866 - over the new branch
railroad now completed to that
city.

In St. Louis I have seen the
newest old clock from the other

in order that he would be present
at his manufacturing a long
distance away. So, not to lose a day,
I bought six plates of a stock
dealer, who advised me to take
No. 30.

I have here exposed 14 plates
trying again to get a picture of my
good friends in the Cong. Mission.
These I have packed to send by
mail, and Mr. Mr. Wright ex-
pects to mail them, when in a
few next week. Will you kindly
develop them and send them
under of each one to Rev. A.
C. Wright*, and write me to
clearing any suggestion about ex-
posure of plates? This year I
must keep trying, till I get some
good pictures -

Yours faithfully,

C. G. Bingle -

with him per day.

H

Charlotte, Vermont.

9, Jan., 1889.

My dear friend,

I am happy to write you that I am home again once more in excellent health and spirits, and with a large collection.

I think I wrote you last from Chilmanna before starting for the western Sierra Madre. Arrived there I found the season well in advance of that of 1887 — closing indeed for most plants and frost beginning to fall. So there was no encouragement to travel far back among the mountains, as was my intention; and, after gleaning about my old camp for two or three weeks, I moved as swiftly as possible far south to

Guadalajara, a grand and beautiful city within the torrid zone, in whose vicinity were far more species than I could manage and where I lingered till the middle of December. At that date the weather was at its coldest for the region, yet there had been only one slight frost, and I left there and saw plants flowering and to flower throughout the winter with spring-time to begin in February. You cannot be surprised that I left with the hope of returning for the spring flora.

Rev. John Howland and wife of the A. B. C. F. M. of Boston kindly took us into their fine living house and did much to make our stay in Guadalajara pleasant.

I spent most of the time

working a region five to seven miles northward from the city where the largest river of the country which drains Lake Chapala has cut a chasm 1500 feet deep — The great "Barranca" filled with a semitropical vegetation with plantations of bananas, sugar cane, oranges, pine-apples, etc.

My collection of ferns will show you that the Guadalupe region was even richer in ferns than that of Monterey. Here, as all along my journey I exposed dry plates for photographs. In the way of a slight return for favors I did some photographing at the mission, making two exposures for each view and one of each of these Mr. Howland got developed in Guaymas, and obtained very good pictures; so I am encouraged

to look for good results this year.

Yesterday I packed in one box to send you by express the plates — nearly 80 — and the few specimens, and in my hurry to improve an opportunity to send the box to our distant express-office, I forgot, as I was ashamed to think, to prepay charges on the box. I really do not know as I have done right in imposing upon you so much labor as those plates will involve; yet you seemed by a remark, in a letter, which found me in Chi^co, to anticipate seeing them come into your hands for development. I am unwilling to trouble you with much expense in the matter, and really ought not myself to indulge in ~~so~~ much more express upon them (for this photographing has been a constant drain upon my failing

resources.) A good proportion of
 them are photographs of trees, etc.,
 made in compliance with a
 request of Prof. Sargent; and I
 have thought that in perhaps
 ought to relieve you of the trouble
 of ~~hand~~ such and turn them over
 to his friend Mr. Codman. I am
 in entire ignorance about your
 relations with him — whether anything
 was paid you for the plates supplied
 to the Garden and Forest. As for
 myself I am under constant obli-
 gations to Prof. Sargent, and am
 glad to serve him in any way.
 But you must not let me
 abuse your goodness and patience
 with my photo work; and I shall
 not cease to feel uneasy, until
 you kindly inform me of your
 expenses on this account, so I may
 repay you, or until you assure me

as I cannot think you able to do,
that you have found some way to
make this business pay its own expenses.

To think of being without my
camera on my journeys and thus
unable to secure these interesting
pictures is unpleasant, quite in-
tolerable; so I am willing to bear
this part of the burden of expense —
one of the least — under which
I stagger and toil in the life of a
collector. But I can't consent to
"ride a fine horse to death" in this
as it certainly looks as though I
am doing; so, my dear friend,
let me hear from you a big
bill, when you are through with
this job. I learn from Miss Turbick
and Mrs. Piper that you have
been very liberal with them.

So much concerning the photo
business for this time; concerning

the lens; I wish to beg you to examine
first the parent without teeth, that
I may have the names for the printer
as early as possible.

Last week I visited our dear
Mrs. Piper in West-Scotland, whither
she came a few weeks ago to bury
her husband. She lost her youngest
son, too, last summer. She returns
to live in Boston and vicinity. It
appears that she has never called
on you — too humble to intrude
upon you! The idea! I urged her
to get into the way of dropping in
to see you. You would both be
chained by this.

My brother's wife sends a dollar and
begs you to print a few photos — 2 of her
sons (No 12 she thinks; it is the one in
which the boys are sitting on the
horse-block,) and Nos 1 & 9 of the
Hewitt house close by.

Have I not - broken forth with
a flood of words?

Now I hope soon to hear from you,
my dear friend; and shall trust
to learn that you and all yours
are well and happy.

Affectionately yours,

C. G. Pringle.

P.S.

My assistant and I got caught
with the photo plate in a wreck
on our way home; I hope you
will find that the glass escaped
breakage as happily as we did.

Charlotte, Vermont.

27. Jan., 1889.

Dear Mr. Savenport:

Thanks for so many
names of ferns.

It would seem that the pinnae of
the *Aspidiums* are sometimes auricled;
specimen enclosed. But is *A. falcatum*
known to grow nearer than the Sand-
wich Islands?

Yours faithfully,
C. L. Pringle.

4
Charlotte, Vermont.

24, March, 1889.

Dear Mr. Sargent.

I have taken great pleasure
in the views so kindly sent by you.

When you have sent me a full set
don't fail to tell me what all this business
has cost you. I feel sure that Prof. Sargent
will want several of the negatives. I have
explained that I cannot ask him for pay for
any such; but I do hope that on account of
his paper or of the Am. Mus. (if he gets them
enlarged for that institution,) will offer to pay
you.

I expect to beg you to finish in best style a
very few to present to Pres. Wade of your city,
who is so good to give one passed over his Mex.
Cent. R.R. I want to show him that there

are large timber trees in Mexico.

My assistant, of six Mexican journeys, Geo. H. Walcott now married in Woodstock, Vermont, will be ordering from you a few views in which he feels most interest, such as that of our camp. He is the latter man in that picture. The other, cousin Carl S. Fendler, will surely want some too.

Among the Guadalajara views you will come upon some of the mission. I made two exposures each time, and took out one of the two plates, which Mr. Howland got developed very satisfactorily in that city - excepting one of the whole mission - three pairs. It was hoped you would get a good picture from the other plate.

Then there were promises made by me to several Mexican gentlemen, which I must keep, if certain views turn out well - Are you not tired?

Here are the tickets - Now for my sets.

Yours faithfully,
O. G. Pringle.

\$4.00 Dues
Merced Union

Charbott, Vermont.

16. April, 1889.

My dear Mr. Tavenport,

I am at last through with my distribution; and before the week closes may be off on another journey.

So now, for a last word concerning the photos. Thanks for the proofs and list by which I am be guided.

My cousin and assistant of last fall Carl S. Prindle, North Ferrisburgh, Vt., will send you several numbers for views which most-interest him or in which he figures. He is the chap with the white hat - seen so often by the trees.

So, too, I think, will my good assistant on six journeys, Geo. H. Welcomes, Woodstock, Vt. You must make them pay expenses or more.

For myself, I will not burden you it must

me pictures from all the plates. I do not care much for many of the trees. And will you not dress up and throw away all such plates as will not print creditable pictures and all the poorer duplicates. Suit your own room.

I beg you to print mount and send here for me at your convenience Nos 29, 30, 36, 37, 43, 48, 49, 50, 52, 54, 56, 58, 60, 61, 67, 68, 69, 70, 23, + 25-

I exposed duplicate plates for the two groups of the Guadalupe missionaries, their school woman and donkey with children, etc and if all the plates were at once developed by a photographer of that city. They came out with satisfactory — with the exception of 67. I am confident, if you will print ^{four} nice pictures from this plate and send ^{on each} (mounted or unmounted,) to Rev. John Howland, Guadalupe, Mexico, to Rev. Henry M. Bissell, La Barca, Jalisco, Mexico, to Rev. A. C. Wright, Tuxtepec, Oaxaca, Mexico, and to

✓ Rev. Mr. Grimes, San Luis Potosi, Mexico.
with price per dozen, ~~that~~ ^{these} gentlemen
will order.

The first three (they show in the picture in
the order in which I have given their names
~~above~~ beginning at the left or next to the
pillar) are missionaries of the A. B. C. F. M.
of Boston and I should think this picture as
well as that of their school at Guadalupe
(No. 66) and the Court-scene (No. 68) would
sell at the rooms of this missionary society.

Please, also, finish up one or two of the
best of the views of ~~the~~ the house, etc., of Rev.
✓ James S. Eaton, Chilimalma, Mexico, and
send him with price per dozen - 32 or 33 or
61 or 62.

✓ Please, also, send two mounted photos of No. 5-7
to Sr Don N. C. Carillo, Chilimalma, Mexico.

✓ And one each of 34 and 35 - (Sambucus
Mexicana in the garden of the governor of Chi-
to Sr Don Abraham Najera, Chilimalma, Mexico.

The subject of N. 36 is *Populus* in the all-
ameda of Ciudad Juarez. I thought Mr.
Sargent would want it to illustrate the
species and its use.

Now I am going to cease troubling
you — for a while; shall be anxious to
hear from you of your health, etc., when I
am in the field; and when I find a
good place to locate for collecting will
tell you when to find me by letter.

I shall probably be near Monterey again
for a time or near Saltillo — or San Luis
Potosi. There are three of us, one an ornithol-
ogist in favor with the Smithsonian; and we
are backed by the U. S. and Mex. Gov'ts,
and have passed over nearly all the rail-
roads of the republic. So don't hear for your
paternal friend,

C. G. Pringle.

I enclose "S." will go in St. Louis a few
days, examine plates and try to profit by
advice —

Laredo, Texas.

25, July, 1889.

My dear Mr. Barnhart,

It is time you had a letter from me, and you and my other and Boston friends should give me a bit

to give me pleasure to report myself as in the best of health and proceeding well so far on this journey; though I am having my usual trouble with asthma. Of the two strong young farmers whom I brought out last May one, the ornithologist, soon succumbed to the heat, and proved inefficient as a collector and was sent back north; and now the occasion of my being here on the border is to attend to the other one, though at first willing for to make the East without me.

have had, has occurred in other colli-
mated. My own trials, during my first year
here and the mental fatigue of reaching you
when arriving here with me, may give you a
hint - a slight hint - of the difficulty
of living and travelling in this country and
carrying on the work which I have
undertaken - The long marches under a
tropical sun (our husband with his massive
carriage of food, water etc., and with his re-
sisting collections), the labour of climbing
and scrambling over terrific, often precipitous
mountains, the tedious and fatiguing journey,
after rare plants growing so thick, the
obstacle, interposed by the towns, peculiar
to these regions, sometimes by wild beasts
and not rarely by the inhabitants of the
country - all these difficulties are forgotten,
when the collector gets home at the end
of the year with his stores of booty, but
they rise in his way as he enters his field
again -

I have said I have been successful as the securing of over 6000 specimens already must testify; but the failure of my assistants has prevented my traversing the mountain south of Montevideo, as I planned doing. Yet I have at two or three different times spent several weeks and have reached the neighboring high mountains higher than before with some good results, as I believe.

I have also made two flying trips to the Guadalupe region with a view to securing the vernal vegetation; and I feel some satisfaction over the way I have thus secured both these known districts.

As to your favorites, the ferns, I can report gathering *Pteris* near Montevideo about limestone ledges near Montevideo also — I can hardly mistake — *Polypodium* — About Guadalupe, numerous as were the species that there should

Themselves last November, I was sur-
prised on returning. Several species
(*Thomomys* *Thomomys* *Thomomys* is one of them)
which must have disappeared from view
before that date are now conspicuous, though
when we left there in the 8th inst. still too
immature to be collected.

I thought to have been back in Wash-
ington by this, but now I must keep near
the border for a week or two longer in the
hope of meeting another progressive season.
I mean to spend most of the remaining
months in Idahoe and neighboring States,
because there I can collect them earlier
to one near Montana or in the State of
Idahoe, and after repeated long
numbers of specimens become of permanent
importance.

I have been prevented by the illness of
my men from taking up my winter for a
trip to the Lake Meade of Idaho.

for sometimes longer, it will be impossible
and yet even it will be getting too late,
because it will be as late as the date
of my two previous trips.

Yet there are good fields before me
and ripe; and if I have my health —
and some good help — I shall probably
secure a large harvest.

For the present I am left to struggle
alone with these mountains and wilds. —
And in the way that I would, it is not well
that none should know in our direction
I have gone.

In Guadalupe I was pleased to see the
fine photo sent by you to Mr. Howland. —
The Howlands are pleased to have me with
them in the mission house, and it makes
a pleasant home for me.

I am so confident that I shall
have my share there soon that I ask
you to address them & by Mr. John Howland,

Guadalupe, Mexico, the letter which
I feel sure you perused, & wish you
soon to write me.

I want to know what disposition you
have made of the Monterey Expedition.

This season I have seen some of the highest
snow-capped peaks in high cool and
what moist wooded slopes of the mountains
about Monterey; and my belief that it is distinct
from A. j. grandiflorum has been pretty confirmed.

And I want to hear how your visit
to this summer see that you are doing,
and all the news about our Soda water
plants.

Till I tell you of landing just as I was
leaving home, a package of my forms to
Prof. Eaton, as you request through you?

Kellogg now to remain with Winnet
O'Brien.

Yours faithfully,

E. A. Craigie.

Charlotte, Vermont.

22, Feb., 1890.

Dear Mr. Favenport:

I believe, if I tell you of my trouble in respect to mounting paper, you will be so good as to step around to some paper warehouse at your convenience — is it Carter, Rice, & Co., somewhere in Devonshire St. ? — and learn where I can buy just what I want.

For years I got my supply from a mill in S. Lee, Mass., paying some 18 cents a pound for several reams each year. Last year I had to send elsewhere, because the company had failed. I sent to Washington, and had to pay a higher price. This is a sample. It came from Holyoke. Now I suppose the Holyoke mills are owned or controlled in Boston; and I don't want to pay freight to and from Washington.

I want flat-white paper like this, weighing 25- to 30 pounds per ream, and cut precisely $11\frac{3}{8}$ by $16\frac{3}{8}$ inches. It has been intimated that the paper offered for herbarium use at 18 cents a pound is culled paper, that is each sheet has some slight defect. If this is true, I have no reason to complain; for I have seldom rejected a sheet.

Will you kindly tell me where I can send orders for paper as heavy as I use and cut just to my size, and have it watched year by year, and at what price?

So you will help a friend out of a dilemma —
Yours faithfully,
C. G. Pringle.

16. March, 1890

Dear friend:

Good for the new Rotterdam,
and thanks to your critical judgment and
determination for it. More than 50 n. sp. for
my sets — about one sixth, and I all. The
while following after Dr. Palmer, that "keen
and careful collector", S.W.

No I have not heard from Miss Furbish,
but why do you ask? soon I can send tickets.

Yours Affly, C. G. Pringle.

Ch. W. Seymour will be in a few days -
why papers made just 17 days.

Mr. Geo. E. Davenport,
8, Hamilton Place,
Boston,
Mass.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Charlotte, Vermont.

27, Feb., 1890.

Dear Mr. Savenport:

It is pleasing to learn that you find so much of interest among my ferns. I thought you might want to send some of them to Eaton or Baker; so I put up duplicates. Sometimes I fear that I am wrong in sending so much work to you. Any time you wish me to send to Prof. Eaton, please tell me.

The *Hemionitis* usually fruits large or small; the shape of sterile and fertile fronds the same. It grows in the great barrens near *Quadrifida* in rich soil of shaded ledges or banks. I got to it late, and secured scarcely

enough material to go around my
sets!

2599 was found on Limestone ledges
of mountains near Monterey -

I trust you will be able to report names
for these two and for 2591 soon so I can
send them to the printer.

Have you heard of the death (in conse-
quence of the grip) of dear Dr. Parry?

yours faithfully,

C. L. Fringle.

Charlotte, Vermont.

18. March. 1890.

My dear friend:

I am delighted with
the photo. proofs and must by you
to print and ~~send~~ for myself, my
boys and my Monterey friends (Grove)
as follows:

No 102 (3 photos.)

104 (2 ")

105 (3 ")

✓ 106 (8 ")

✓ 108 (8 ")

109 (2 ")

110 (3 ")

111 (3 ")

112 (4 ")

And send me account of the photo ex-
pense of last year.

Not long ago you enquired the height
of North. ridge. It is over 100 feet

I am to be a good deal this summer
(D.V.) of the mountain range in which
this and *Aspidium* n. sp. grow especially
between San Luis Potosi and Tampico
300 or 400 miles south of Monterey;
and I trust to get more of both
plants and other new species of fern
besides.

Yours faithfully,
C. G. Pringle.

Mr. Cleveland of San Diego writes
that he expects to leave next summer
and go as far as Maine. He begs plants
from me most liberally this year.

Charlotte, Vermont.

4, May, 1890.

My dear friend;

Time flies, and tomorrow it is Good Bye to home - to mother and friends and away into the uncertainties of another long journey.

I have asked Edward Tatum Esq., of Wilmington, Delaware to send you a little money on account of the photos.

Please send a set of them to my dear friend, sister-in-law of last summer, Chas. C. Hammond.

Drownsville,

Winlock Co.,

Vermont.

Another to my assistant of last
year, Fred. A. Swift
Stamford, Vermont. X

Another to

Geo. H. Welcome, X

Brookstock, Vermont-

And the rest to me in Laredo, Tex.

No. I mistake. In this way I may
fail of getting some of the pictures.

Well, then send to me here a full
set and then proceed as requested
above as nearly as you can.

Can you not get a rest for
coming summer? You can not
run on many years longer in this
way. It pines me, my dear friend.
I know that you are weary and
ill.

Next address in Mexico,

Ch. Rev. S. W. Grimes,
San Luis Potosi.

Yours faithfully, C. L. Pringle.

H

San Luis Potosí, Mexico.
(Apartado 92.)

21, June, 1896.

Dear Mr. Loomport,

Your favor of a long time
ago with photos was thankfully received,
and many a time since. I have tried
all in vain to find an hour to write
you - I wanted you to know that I
am quite well and am progressing
finely.

Twice a week, on Thursdays and
Saturdays at 12.15 P.M. a train leaves
this city for Tampico, returning
here on Wednesdays and Sundays
at 11.45 P.M. Since the first week
in June I have with my assistant
been on nearly every train. We

have gone down, seldom to the
lowlands, but usually to the
lower mountains, where we could
work near two full days each
trip. I was never in so rich a
region, and now it is raining there
and many plants are in condition to
be picked. I am trying hard to
master the vegetation there. Each
great tree is a garden of ferns
orchids, etc. I have found there
— as yet hardly mature, however,
— some the fern unknown to me.

Now I show you a little fern
collected in the neighborhood
of Guadalajara last May, which
seems to me different from Lycopodium
leptophyllum Sw.

In the hot low rainy country
we can find little food and little
shelter — some not infested with
bad vermin. So we carry our

food, and sleep in our rubber
coats in railroad tunnels, in mount-
ain sides, etc. We cannot dry our
plants in that climate, so come
back to this sunny and temperate
dry region, during Thursdays,
Sundays and Mondays to their duty -
and others, as writing.

I still keep in view my plan
to getting back to Guadalajara next
month.

It would be comforting to receive
a few lines from you, and I hope
you are full of better health.

Yours faith fully
C. L. Pringle

Charlotte, Vermont.

11. Dec., 1890-

My dear friend:

I have just returned in safety and in excellent health from my Mexican journey of 25,000 miles, bringing 20000 specimens — material for more than fifty sets of 300 species.

I am eager to hear from you, for it is a long time since your last letter came to San Luis Potosi.

I have come home earlier than usual, so that I may next year get back into the tropical forests while the trees are yet in flower or fruit — I was much too late last spring —

I did not expect to find so much trouble with the other people.

and before the intolerable heat returns. This is in compliance with Prof. Sargent's wish.

So I must make my distribution as soon as possible. I have about 20 ferns for my sets, and can get specimens ready in a few days. I have thought best to ask, if I should send these to you. Or, are you going to be too tired and too busy during this month to give attention to them, so that it would be doing you a kindness to direct them to Prof. Eaton for his determination? Of course you would have specimens anyhow. Nearly one half of the species are Polypodia.

I write briefly this time, but remain Yours faithfully,
C. G. Pringle.

Charlotte, Vermont.

19. Dec., 1890.

My dear friend:

Two days ago I sent the ferns. You must have them in this, and must have found within the pit a lot of the Sierra Madre Aspidium. It is all that I gathered last season. I thought best to send a long list of my specimens, large and small, so you could see the plant in all its forms and states. Some of the specimens grew on ledges rooting in the crevices of the limestone, others grew in deep rich woods of mountainous woods. It is a very common species of the Sierra Madre of eastern Mexico, and is not Aspid. - justusifolium at all. It is all - a collector must get to know and distinguish plants. Aspidium Madrone - justusifolium - worth a good name for it. Please in case of any doubt, you will find the name the same from Dr. C. G. Smith.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. C. Townsend,
8, Hamilton Place,
Boston,
Mass.

Charlotte, Vermont.

19 Dec., 1890.

Dear friend:

Thanks for the Photograph-
ic Annual. And with your
fern photo. you give me a
sensation. Now I shall be im-
patient to get back once
more to Guadalupe, for I
have but 25 specimens left
of *Noth. Nealleyi*, v. *Mexicana*
— only half enough for my
sets. I got "*Noth. Grayi*"
near Chilimalma (No. 463).
Have you one of these speci-
mens, so you can tell whether
it is that species or *N. Nealleyi*.
And do you think this last a
very good species?

Yours &c. J. G. Pringle.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. C. Townsend,
8 Hamilton Place,
Boston, Mass.

Charlotte, Vermont.

23, Dec., 1890.

Dear Mr. Ravenhart.

Your postcard concerning
the Sierra Madre Aspid-
is received. Well, I will
give in, especially since I
read in "Hortus" "Synopsis
Filicinae" that *A. juglandi-
folium* is made to include
five species of Fournier. And
perhaps after all it was this
Sierra Madre plant (very
likely from Mt. Orizaba)
which furnished to Cunge
his type. My *Chilostachya*
and *Arizona gracilis*, Hino-
sua in texture, with broader
pinnae and so sparser below - tooth-
ed, may better be called
an extreme form of a variable
species - I am in conversation
C. G. P.

Mr. Geo. C. Javenport,
8, Hamilton Place,
Boston,
Mass.

Charlotte,

30, Dec., 1890.

My dear friend:

I am glad to hear from you so favorably.

As your judge, it is probably best to submit *The Polygynium* to Mr. Baker. I do not hear from Mr. Watson of late; so do not know when to expect his list of determinations.

There may be time to fix the name from now, before I begin sorting up my sets. Dr. Britton is not to send some sedges to New a week or two ago.

The Anemone was a surprise to me, so close to A. Mex. in appearance yet so distinct in characters. I could not refer it to any sp. Came near finding it *belinellii*; must make another trip to find it.
C. G. Pursh.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE

Mr. Geo. C. Sampson,
8, Hamilton Place,
Boston, Mass.

Charlotte, Vermont,

6, Jan., 1891.

Dear Mr. Savenport:

On New Year's day I reached home again in perfect health, bringing a large and rich collection as ever; and I have no time in putting into your hands the remaining forms of the collection. And I have remembered your wish to have more specimens of our new species. Polystoma rigida, Savenport, however, you will not find in the package to go by mail with this, because I did not visit the Monterey region on this last journey.

I anticipate much pleasure from the reading of your fine papers in Garden and Forest. As yet I have not had time to find them. I hope this will find you well and

happy, and remains,

E. S. Ringer.

Will you please give me the present
address of Prof. L. M. Underwood.

I have a strange *Lyceum* in it
and it is ~~in~~ ~~the~~ ~~line~~

Charlotte, Vermont.

8. Jan., 1891.

Dear Mr. Sargent:

Last evening I was delighted⁷
to receive your list of fern determinations; but
I must trouble you further for I find no
mention of Nos 335-6 or 335-7 (which are the
same plant-) 335-8 (is this *Polypodium elonga-*
tum, Swartz?) or 335-9.

Can it be that I did not send you these
three ferns?

As there is time (Mr. Watson's determinations
not having come to hand yet-) I will wait-
till you hear from Prof. Eaton respecting
No 335-5, before printing the ticket.

335-1 did I not give this correctly as
335-1?

Here I enclose 335-8 (*St. pleuralis*) and 335-6
(pinnate *Polypody*) and 335-9 (is this *Heris*?)

Yours faithfully,

C. C. Ringle.

Charlotte, Vermont.

12, Jan., 1891.

My dear friend:

I cannot understand how the two ferns, 3356 - 3357, failed to go to you, unless they got into some bundle making up at the same time for Mr. Watson or someone else.

However I now send you both specimens for study and keeping. These two are for cat.

Yours faithfully,

C. G. Dimpfel.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. E. ~~Washington~~
8, Hamilton Place,
Boston, Mass.

Charlotte, Vermont.

25th, Jan., 1891.

Dear Mr. Farnsworth,

I thank you for your long letter. It is just what I have been wanting. More than once amidst my busy hours the desire has come to me to ask you about Mr. Gray. You have anticipated in the fullest measure my requests; and I shall permit myself by the information which you give me. Too bad!

I foresee all these discords and all this rivalry, before Dr. Gray's death; and on my last visit it has impressed my forebodings. And now the calm confidence then shown by Dr. Gray is reassuring. "After a long journey," he said, "there will be one here who is a strong man." He thought me a little kinder sister. I

am bound to be loyal for Dr. Gray's sake
and by reason of his own wisdom
and nobility of mind.

I don't know as your varieties
name for the *Platanus longifolia* with
care for any distinctions. Will I not
send you two large specimens? If both
show the bipinnate character, I make
a mistake. That character is an extreme
one only shown by the most luxuriant
plants of the region. The most of my
specimens are simply pinnate like the
first little branch sent you, only much
larger. What can I do? Mr. Watson's way
in such cases is to write the name thus:
"*Platanus longifolia*, L., var." I suppose all
the specimens show extreme variation
in shagreening.

I believe the Aspidium is right
of in the right way. This eastern form
is quite like the type.

Yours faithfully,

C. E. Townsend

Charlotte, Vermont.

24, Feb., 1891.

My dear friend:

Here are the tickets
for your fern specimens. If any are
lacking, or any further information^{is} desired,
please let me know.

It was kind of you to give me
a jump into your study.

I have not yet begun the dreadfully
irksome task of making up my sets. Yet I
hear from San Luis Potosi that the trees
are in full leaf there. However there
remains many a long month ere the
end of the year.

Yours faithfully,

C. G. Pringle.

Charlotte, Vermont.

16, Jan., 1892.

Dear Mr. Loomis,

I am glad to hear from you once more, and thank you for the firm paper, though I have the Garden and Forest regularly and never read them. I thought it strange that you should change to Horticultural. My own contributions to G. & F. have sometimes been edited in the way you complain of; I have supposed it was done by the New York editor, Mr. Stebbins.

Of the Achrosticum I found in the barrens of Cas Canoe, State of San Luis Potosi, amongst willows and cypress bushes, only three or four plants. Its canopy is a few inches high, quite like that of Cuscuta Struthiopteris; the fronds are erect, four or five feet high, all mature ones fruiting at the top as

shown by the specimens.

Oh, yes. I am so sick in fact, that I shall never miss the specimens you find in your package - I gathered them for you. I aim to secure about 100 specimens of each fern collected nowadays - so my supply will not run out.

I have been distressed over the illness of Dr. Cutler, whom I have long and warmly regarded as a strong man with a promise of long life. Now, we could accomplish all the work which was upon him, and must be prepared to lose him at any time. And where could I do without him?

Yours faithfully,
C. G. Pringle.

* *Gymnosporium bryophilae*

Charlotte,

Jan. 29, 1892.

Dear friend;

Glad to hear of
your progress in the study
of my ferns.

As, in note, reference to
the two specimens of
Asplenium I have
secured one third enough
for dett. You will want to
send me specimens to Prof.
Lindb., I suppose.

Of *Polypodium* 4007 I got
only two specimens -
as were. Took it for a form
of *P. aureum*.

Yours affly,

C. G. Pringle.

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE

Mr. Geo. E. Jamnport,
67 Talley St.,
Newford, Mass.

Charlotte,

1, May, 52.

Dear Mr. Brewster:

I have decided to put by for another distribution all plants of my last collection not fully determined, and to make up my salt according to this list, so that I can get away on another Mexican journey within two or three weeks.

I think I send herewith tickets for all the specimens sent you -

You will be so good as to write me, before I go. Please tell me the news from Miss Kate Furbish -

Yours faithfully,

C. G. Pringle -

H

Charlotte, Vermont.

23. May, 1892.

Dear Mr. Javenport:

Then I made a blunder in writing "*Polypodium ensifolium*, Willd." above the other name and am sorry for it.

I believe the two fronds of *Polypodium petiolatum*, were alike in character if not in size. Mine is 10 inches broad by 16 inches long on a stipe 7 inches long. It has 28 pinnae besides the terminal one; these are ^{alternately} 4 to 6 inches long by 3 to 5 lines wide.

I looked for more plants (somewhat hurriedly,) and in vain; but shall hope to get it for sure this year, though it grows on mountains infested by tigers.

If I get many ferns this year,

I shall have to push further southward; for I have a clue to only one or two strange ones beside this.

By the storm - and another came I am hindered from starting on my journey today. Possibly may not leave this week.

If firms turn up, I shall wish to put them early into your hands for study.

I leave with you my kindest wishes, and remain

Yours faithfully,
C. L. Pringle.

11 San Luis Potosi,

29. Nov., 1892.

Dear friend:

In Guadalajara a short time ago I was surprised to hear of your anxiety concerning me, and now returned here I have your letter of the 27th inst.

At the beginning of the season I was straightened by the failure and return of one of my assistants, and since have had to crowd so incessantly to secure a good collection, that letters were neglected as much as possible. As I have secured but very few from this season, I must think that I shall have to go down to the coast-region or far to the south for more — but not this year. Hope to turn home in two weeks —

Yours faithfully, C. G. Pringle.

UNION POSTAL UNIVERSAL

E. U. S.

EN ESTE LUGAR SOLO DEBE ESPERARSE LA DIRECCION DE QUE SE DEBE RECIBIR EL CORRESPONDIENTE A LA ADRESA

UNION POSTALE UNIVERSALE

Charlotte, Vermont.

5th Jan., 1893.

My dear friend:

Thanks for your
New Years greeting.

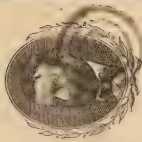

On Christmas morning I
got home from my eight to Mex-
ican journey in excellent health,
and here at last I send you
the few forms of my collection.
They are few because I did not
descend much into the lowlands.
On the high lands of Michoacan,
where I spent much of the time,
I had already collected the forms
and on the mountains of the
State of Mexico, where I worked
nearly all the rest of the season,
I found only those to interest
me. Did you ever find names
for 3828 and 3957 of last year?

Yours faithfully,
C. G. Pringle.

POSTAL CARD ONE CENT.

THE GREAT STATESMAN

THIS SIDE IS FOR ADDRESS ONLY.

Mr. Geo. E. Tammert
67, Valley St.
Medford, Mass.

14 /
Charlotte, Vermont.

13, March, 1893.

Dear Mr. Davenport.

Polypodium pitiolatum was found on the branches of oaks on the mountain sides about the Station of Las Canoas in the eastern part of the State of San Luis Potosi. This must have been near the limit of its distribution — certainly on the western limit and near the dry region, where ferns cannot grow on trees — for I searched somewhat widely, and found only the two specimens.

I send on mine, and the tickets.

Yours faithfully,
C. G. Pringle.

14 1
Charlotte, Vermont.

19, Dec., 1893.

Dear Mr. Savenport:

Once more I am home safe and well from my Mexican travels, and with my usual collections. So, I send you the ferns, though they are few, so few as to disappoint you, doubtless. This is owing to my having kept to Jalisco most of the season and to my being handicapped by poor help. In May I got into a good region for ferns about the Colima Mts., as you can see. It was my intention to return there for ferns, etc., in autumn — the season for ferns — but my assistants were too much

It is the names of the two species of *Bygonia* among which I make
for the printer. Is the tiny one *G. Elaeagnifolia*? I am to visit Combridge

of a burden; so, instead, I came
home early to unload.

If, as I think, I send you Hort.
Grayi, it must be from an extreme
southerly station — much farther
south than before recorded. It was
50 miles west from Guadalupe,
where H. Schaffner rather than
this species is common.

By the way when I compared
these plants with my lib. specimens
I came upon an unrecorded
specimen of Palmer's Batopilas
(S-W. Chihuahua) collection, 138
1888, which is densely tomentose
beneath. It is tickered "H. Grayi",
but Eaton makes no mention of
it in his report. It may be worth
while to look it up in Camb. Herb.
With the wishes of the season
I remain, Yours faithfully,
C. L. Fernald

Charlotte, N.C.

18, Feb., 1894.

Dear friend:

Shall I distribute 4420
as a variety of *Gymnogramma* *Car-*
oliniana; and, if so, to name you
a varietal name. As it grows on
cliffs, murialis would be fitting.

Yours affly, C. E. Pringle

NOTHING BUT THE ADDRESS TO BE ON THIS SIDE.

Mr. Geo. E. Favenport,
8, Hamilton Place,
Boston

Charlotte, Vermont

18, March, 1894.

Dear Mr. Davenport:

I was delighted to get your letter of Feb. 27th and see how well you had made out in naming the difficult forms. And here are the tickets — as many as printed. I am sorry I can hardly send you any more specimens. I send you more than half of my material of 5134 *Asplenium paniculatum* Swartz, var. *laciniatum*, Davenport, all of that of 5131 *Asplenium cicutarium*, Sw., var. *pubescens*, Davenport, and of 4420 I have had to divide specimens too small to make them go around my distribution.

Yes, I believe you have received all the forms collected by me.

3920 *Asplenium hastatum*, 1891.

Now may I ask a favor? Dr. Goodale wishes me to take photo-

graphs for his museum. He proposed to furnish me with a wide-angle lens for near work on fruits, flowers etc.; but I hear nothing from him and he may have forgotten the matter.

My camera is in Guadalajara, and you can tell better than I the size of lens it requires. Am I wrong in size? Do I need to buy some new inventions in the way of a camera, or will mine still serve about as well. I would not like to incur the expense of a new one unless it is advisable. Will you kindly tell me the cost of such a lens, as I need, and advise about plates or films and their cost, and say if you will buy for me, if I send the needed amount?

Yours faithfully,
C. G. Pringle.

I have become unwell, up my side, and hope to start on my health journey in two or three weeks.

Charlotte,

25th, March, 1894.

Dear Mr. Davenport,

Here are the tickets
needed by you. I am glad to
hear your judgment concerning
the two species of *Trichomanes*.

From Cambridge. I now hear
that Dr. Gooden has ready
for me both a camera and
lens.

Yours faithfully,
C. G. Pringle.

Charlotte, Vermont.

12, March, 1895.

My dear friend:

It was not till the
1st inst that we reached home.
All right except for a tough
fight with malaria, now sub-
dued.

Did you think I got but few
ferns? The last month was
spent about Orizaba on a
grand fern-hunt — as the
package I now send to your
home address by mail may
show you. Those without tickets
are for sale; will you kindly
give attention to these first,
so I can send the names to
the printer?

The region about the base
of Mt. Orizaba is a wonder-
ful place for furs. I only begin
on them, and hope to return
to secure them all.

I am desolate in my home,
having to mourn the loss of
my precious mother afresh.

Yours faithfully,
C. L. Pringle.

Charlotte, Vermont.

21, April, 1895.

Dear friend:

Thanks for the free
names. As respects the *Aspidium*
Phlegmaria and *Gleichenia* un-
determined by you, I think
there remains still a month
or more ere the names all
come in from Cambridge so
I can finish printing tickets;
and in that time send light-
ning copies to you on them -
or I lay them over for another
year -

Yes, Mr. F. H. Horsford is
operating his nursery very much,
and can, I think, supply al-
most any plant.

Dr. Trelease writes that you

did not find a negative of
Agave Americana. I am
not able to say positively that
I ever photographed the plant,
but an impression that I did
remains with me. I did not
know the name till recently,
so that name does not accom-
pany the plate. You can doubtless
remember if you saw in looking
over the negatives one of a very
stout *Agave* with stems as thick
as our leg and some fifteen
feet high and with leaves
but two feet long, very broad
and succulent. I can scarcely
hope there is such a plate to
be found.

I have 1500 slants yet to
mount and my own list of
to make. Yours faithfully,
C. G. Pringle.

Charlotte, Vermont.

26, May, 1895.

Dear Mr. Davenport:

It was the first time
I have failed to see you when
in Boston. I told you how it
happened, and, I believe, how
I was to start back on another
European journey as soon as
I get my distributions made.

Very soon I must take such
plants as are fully named and
make them up into sets, letting
the unnamed ones lie over till
another year.

So, I wanted to ask if you
gave up the *Aspidium* and the
Phlegmaria, and the *Gleichenia*,
nos. 6077, 6132 and 6129. As
these were growing close by

the city of Orizaba, so often
visited by collectors I thought
they must be well known
species.

And I wanted to tell you
how I have the old house all
my own now, how the plantation
of trees have grown steadily since
your visit a dozen years ago, and
how (but alas!) I am
lame and half sick
from mourning for my
precious mother, as I have
put away her things to make
room for the stranger who
has come to take care of the
house in my absence.

Yours faithfully,
C. G. Pringle.

14
Charlotte, Vermont.

28, July, 1895-

My dear friend:

Accept my sincere
thanks for the photographs of my
~~deceased~~ mother so thoughtfully
made for me. They will help to
keep fresh the thousand precious
memories of her which I treasure,
which I cannot hope to find
ever one to comfort and console
me in her stead.

I am happy to be able to send
in a package by the same mail
the glass specimens you need.
It gives me pleasure to hear that
you are getting along so well in
the recovery of my friend.

Now I am near the end of my
distribution, and may be setting
out for Mexico again after two weeks.

Yours faithfully,

C. G. Pringle.

Mexico City,

24, Nov, 1895-

My dear friend:

Barring some rheumatism I am well and prospering as usual. Have just come from working the region of Cuernavaca 40 miles south of here. There I found three ferns strange to me. I don't know what this gold fern can be unless *Chilanthum aurantiaca* (or *C. ochracea* of *Species Filicum*), though it does not agree with the description very well. As far as I know that species has only been collected once and that by Hartweg near Marabia in the same zone with Cuernavaca.

The little *Asplenium* I found

you will find to be new,
and call perhaps A. fibrillo-
sum. Note the fibrillos scales
on the stipe and rachis and
the fibrillos-laciniate involu-
crum, so distinct. It is a
very plant and must be rare
in its distribution. The other
form is an Aspidium with
aspect of A. marginale.

I hope this will find you
well and happy. And it would
be glad to hear that soon in
Oaxaca.

Can't tell yet when I will
be returning home. Am tempted
to go when the end of the year
comes.

Yours faithfully,
C. S. Pringle.

Charlotte, Vermont,

7 Jan., 1896.

My dear friend:

Once more I send you greeting from my home. The warm, bright skin of the Mexican tablelands tempted me to stay on through the winter; but the fear that, if I should do so, I might not get afield again earlier than I did last year decided me to come home and make my distribution as early as possible. But what a black welcome Vermont is giving me! I got quite far from rheumatism, and have been in perfect health since.

And in fine spirits, only no glad greeting from my precious mother, and my heart is desolate.

I am eager to hear how it fares with you. And did you receive a letter from me some weeks ago enclosing bits of two forms? I have better specimens and at least our other species to send

you for name soon. And the forms
not distributed last summer - I
believe you wrote that you had at last
made them out. I would like to send
the tickets to the printer.

Yours faithfully,
C. B. Fringht.

11
Charlotte, Vermont.

3, Feb., 1836.

Dear Mr. Sampson:

I was true from my examination
of fresh specimens, as I gathered it, that
6077 was an *Rapidium*, and to mark the
passage. Now, after a close inspec-
tion of many specimens of *Rapidium* nearly
all I analyze with bits to show you.
The infusorium is very beautiful (under
the best lens I have appearing like
a perfectly body), and is covered
with all the rest of the plant with
resinous glands. It was growing in a
peculiar situation - in various places
on the face of a cliff of limestone, (perhaps it is - I could find no other place).
It must be rare, and very hard

escaped the notice of earlier systems,
of that much troubled system.

Not so with no. 5120 which found very
the high branch of a tree, where it
must have been seen by Stanton
before - I suspect you will find with a
good microscope that it has an Indian
but much more unique than the other
ever - so fine like that, that it
early belongs and becomes covered
by the development of the sporangia.
Now to answer the question of your
earlier letter, I found no plants higher
than 4-5 feet - If more in plants of
that size the number is large - It is as
a bird will show very sharp, with
long scales.

P.S.

I have to thank you for calling my
attention to the matter of *Aspidium com-*
planatum. I must have got badly
mixed on this and *Phyopteris* rubra.
I have ^{long} known of both growing about
Grand Abasco - I remember these
narrow fronds. I only collected a few-
not enough for det. I think I must
have sent them out early as a
continuation. I'd not meant to
for suggest (I know now why) and
cannot find as I have one left
among my duplicates with note
forget the plant, when again in that
place. I am sure -

E. B.

H

Charlotte, Vermont.

15, Feb. 1896.

Dear Mr. Sturtevant;

No. 5963 I first saw in the spring of 1894 growing in moist places high up on the Slide at Brown. It was then too young to collect & I did not return later on purpose to secure it, partly because the plant crept upon me, and partly because I feared the night-frost might destroy it. I found it *Pellaea marginata*. Last summer, however, when I was in the same woods, since I saw upon a plant that had not died down, and took too much time to find out what it might be. I did know as I saw it up it was too bad to put it up in the collection.

Specimens — two old ponds — suppose you
 get it not awfully, and let me retain
 a full set for type specimens.

6190. *Aspidium sphaerocarpon*,
 What authority for the name
 shall I print in the title?

 the same as my no. 440. distinct
 with *Aspidium Aspidium*, 1848.
 Which name shall I use now?

6191. Well, I will try my hand at
 describing a new plant. Write me
 let you suppose upon my description
 will be not?

Asplenium fibrillosum, ^{Dr. B. B. B.} ~~Dr. B. B. B.~~

— We, let me discover the new species
 and leave to you their description.
 I like that arrangement — as you

Yours faithfully,
 C. G. Bingle.

Charlotte, N.C., Dec. 1896.

Dear Mr. Sargent:

Aspidium Moxosum, Lampa
is white and *Aspidium Saccum* is
pretty near *A. Escrosum* strictly named.
So, if you don't see much, I will use
the first name for both in form.

I have no. 2007 of *Aspidium*
acrostichum, var. no. 6116; and thinking
it was like the rest of the species.

Yours affly,

C. L. Dring.

4

Charlotte, Vermont

26, Dec., 1876.

Dear Mr. Seagraves:

Asplenium filicinum,
was found 21st Nov. 187⁵ growing on
a mossy bluff of a barren mountain
above Lamoine.

I wish to thank you for the
patience with which you have followed
up the few snails you have thrown
down.

Yours affly,

C. E. Fernald

I am struggling with my word, hoping
to get my distribution off next month.
So as to soon back to my field work.
6377 was printed, as you see, so, by your term
6132 *Aspidium setosiusculum*, *comp. nov. sp.*

Charlotte,

17. March, 1826.

Dear Mr. Campbell:

It may be that as
 some weeks before I shall receive
 my ticket as to send you a letter;
 therefore I should not delay to give
 you with the united love.

6071. *Aspid. rigens*, in part of a ship
 of the same type. Found on the Atlantic Ocean
 by the and Corbett, Jan. 24. 1825.

6132. *Aspid. rigens*, in part of a ship
 of the same type. Found on the Atlantic Ocean
 by the and Corbett, Jan. 24. 1825.

6191. *Aspid. rigens*, in part of a ship
 of the same type. Found on the Atlantic Ocean
 by the and Corbett, Jan. 24. 1825.

Belmonte, in part of a ship, found on the Atlantic Ocean.

Jan. 24.

6127. *Aspid. rigens*, in part of a ship, found on the Atlantic Ocean.

near Snyden, 5, Feb. 1844

Dear Brother, I have been with hope
of seeing you at San Felipe about Nov. 1843
(I will) 22 Sept. 1844

I wish you had intended to come
but, if this does not happen, you will do so.
I am working desperately on a volume of
Tracts which will require many more -

Yours faithfully,

C. L. Pinyan.

Ed.

I have passed through a very
difficult time. You may remember that a
family of Indians living near my home for some
time. The mother, a poor woman, had
my cousin, and both were we buried here.
Now the husband is her daughter, a girl
of eighteen, but poor and ignorant.

Charlotte, Vermont:

28, March, 1896.

My dear friend:

Your reasons for publishing
the new form etc. ones outweigh
mine for delaying. Mr. Nelson
is likely to mint with it; had he
been taking form when with me on
San Felipe he might have got it
then.

And Fink — I had not heard
of him before. Will you kindly tell
me who he is, where from, and
where in Mexico he has been collecting?
And where do his plants go to be
named? And does he collect in
large quantities?

Yours ffs,

C. L. Fernald.

Charlotte, Vermont -

25. April, 1826.

Dear Mr. Sampson:

Constantly overloaded
with work, since I came home
at New Year, I have at last
arrived face to face with the
task of making distribution -
the most loaded of all my tasks.
But this year not a long one.

So, at last I am able to send
you tickets - I believe I sent before
some of the printers proofs.

Now I hope to be starting on
my 12th Mexican journey in
about two weeks -

I am not called to leave
home this season; so, I sincerely
hope to see you - but will
Yours faithfully,
C. G. Briggs

Charlotte, Vermont.

29. July, 1896.

My dear friend:

Once more I am home from Mexico in good health and with a large collection — but — only a single firm for my sets! I kept within fifty miles of the City of Mexico nearly all the season. So, I am sending you along with this only three of four firms. Will you kindly give me the name of the large Acrostichum as soon as convenient so I may print tickets? Earlier collectors have found about Cuernavaca two or three species of Pellaea, which I can't yet find. I did see a Pellaea

from that region, which can be no
other than *P. Summari*. If really so, I
am surprised that it was not seen there
before, for it is abundant on the lava
beds six miles east of Cuernavaca. Is
it possible that this has been called
something else? On these lava beds *Hem-*
ionitis elegans is abundant also —

within fifty miles of Mexico City!

An Indian revolt in Oaxaca in the
spring deterred me from going there
early after more material of your
new ferns. I shall hope to do them justice
next year.

Hoping to hear that you are well
prosperous and happy, I remain,

Yours faithfully,

C. L. Tringler.

Charlotte, Vermont.

13, Jan, 1877.

Dear Mr. Edouard:

I must turn over to you these questions of Mr. Gilbert. He wished to get my Mexican ferns, and I sent him some 80 ferns and fern allies with which he was pretty pleased, sending me in return a package of his Jamaica ferns. You will probably correspond with him directly in this matter.

Did it seem incredible that I should gather so few ferns last season. I am an old prowl too much; yet sending anything like what I sent you.

It does not seem as though I am to be invited to visit Vermont this winter and I am still very full of pity

Work into the field very early
Spend faithfully
C. H. Pringle

Charlotte, Vermont.

25-April, 1897-

My dear Friend:

It is apparent that I shall not visit Boston this season. I have just finished making up an herbarium of foreign plants, though I may wish to add to it considerably if I can find opportunity.

Since the first of March I have mounted nearly 3500 sheets, applying myself closely and unremittingly - and I am still going.

Next week I shall be making my distribution - 500 sets of 300 species each. Next business preparations and away on my 13th Mexican journey. I expect to go early to Canada to join a

friend resident there, Prof. C. Congall of the State Normal School, on a trip through the wild Indian Country to the north east of that city. As Prof. Congall, whom I like, offers me good quarters in his house, I may spend much of the season in that state.

I enclose a letter which will explain itself. Will you tell me what you think of this man and his hair-splitting work? Ought I to drop him, and let him alone? Or may I supply him with material?

Faithfully,
G. P. Fisher

Charlotte, Vermont.

24, May, 1897.

My dear friend:

I expect to set out on
my Thirteenth Mexican journey
tomorrow, and hope to be in
Oaxaca during June. So I am
likely to secure your new *Pellaea*
and *Acrostichum Pringlei*, Jacq.

Yours faithfully,

C. L. Pringle.

Charcolle, Vermont.

17, Oct., 1877.

Dear Mr. Sampson.

On my last Mexican journey, I gathered, I believe, not a fern specimen! I was all the time in fields previously visited by me, and I left rather early for ferns. I spent a month on a trip to Oaxaca, but it was early for the ferns desired from there, and I was expecting to return there in better season.

My journey went rather hard. In my way out I contracted sciatica, and the pain in which I worked the first month, impeded my success. Then I took out a fresh assistant, who suffered from malaria every week, so it was well to expose him to sun and hardships. Consequently I had to work alone

in the fields; and exerting myself to the utmost I got worn and nervous till, when it became evident that my assistant should not stay longer in that country, I was willing to come home with him for a rest. The journey was a rest. And, when I had been home but six days, I took another man and started back. But I found on arriving in El Paso, Texas, that I could not get through by the Mex. Cent. R.R., on which I had passed, because thirty or thirty miles of its line was under water. An ancient lake bottom had filled with water under floods of unprecedented extent.

Hence I am again at home. But the plan is that I make my distribution before winter, and be back in Mexico by New Years to collect in the Tropical lowlands during the first months of the year.

I am all alone again in This
 big house, because I have not
 yet found and engaged an
 assistant. It is a good thing
 to be at home and amidst my
 herbarium with a chance to
 study and to rest. But here I
 am often reminded of my loss
 of my precious mother and of
 other friends, so that Sadness
 mingles with the joy and com-
 fort of home -

And bereavements follow
 one after another. The last
 loss was that of our dear friend,
 Mrs. Piper. Did you hear of
 her death, which occurred on
 the 4th of July? I was not
 surprised to hear of it, for each
 of her latest letters was written
 as though it was to be the last.
 But a great void was made
 and such voids are not to be
 filled in This world -

I have but a moderate collection
this year; and shall have to be
careful about incurring expenses;
therefore it seems doubtful whether
I shall visit Boston this season,
or see you and my other friends
there.

Because I did not return to
Boston your letters addressed
to me there were never received.
Too bad -

I am wanting to know about
Schott. Did he collect for the
Field Columbian Museum, and
where? And when?

As Charles Smith collected so
much with me, I am not sur-
prised that he got *Pellaea man-
braccia*. Did he get *Acrostichum
Pringlei*? His plants were larger
than mine - another species?

Yours faithfully,

C. L. Pringle

Charlotte, Vermont.

9, March, 1878.

Dear Mr. Favenport:

I thank you for sending me an account with samples of the firm of Messrs. Congatti and Gonzales. Prof. Congatti is a warm personal friend of mine. He is Director of the State Normal School of Oranienburg, and my home, when in Oranienburg, is in his house. He is a cultured Italian, fair and blue eyed and gentle. When I was living with him last July he told me of owning with his brother a plantation in the mountains south east of Cordoba, and urged me to

join him in a botanical exploration of that district in November at the time of his vacation from school. He believed we might find not a few new species there.

When November came, I was home with my sick assistant, so he took with him, it seems, Prof. Gonzales, one of his assistant teachers, a young man much interested in botany.

Only a few days ago I received a letter from Mr. Gonzales saying he should anticipate my visiting him again this coming summer. No doubt he will talk again of our collecting there.

Cordoba; and I am sure I shall hope to succeed in doing so this year; and if I do, I shall have a chance to help you to the farm desired.

I know they call the mountain north of the city of Oaxaca 'Cerro (hill) de San Felipe'; but, as its elevation is 8,000 feet above the city and 10,500 feet above sea level, I thought I ought to write it "Sierra (mountain) de San Felipe", especially as it was in a range called "Sierra de Juarez" and none of the peaks are noticeably higher than this one nearest the city.

Good as Mr. Conzatti is and
 a hard worker as compared
 with the Mexicans, he would
 not make me a profitable
 associate or assistant, if he
 were free to do so. And he
 has contemplated changing his
 profession to naturalist collector.
 He would recommend me a
 Mexican assistant from amongst
 his large acquaintance, if asked
 to do so; but I could not think of
 asking him - could not think
 of depending upon Mexican help,
 for living with such - I had the
 best one I ever saw, yet - let him
 go to a friend of mine.

It is exceedingly difficult
to find just the right sort
of a man for my assistant
in Mexico. I have had them.
But I have not yet made
choice this year and am
perplexed and discouraged
over the matter.

I am now faced to face with
my distribution. It will not
take long. So, I think I might
get away about April 1st.

If we are to have a war with
Spain, I wish to go carefully, but
think I can keep safe among
or near my good Mexican friends.

Yours faithfully,
C. L. Brainerd

1100

P.S. Have I told you before
that I have no mounted
specimens of the *Ophiopora*
cited by Mrs. Britton? I must
collect this year the Mexican
species for distribution -

H

Charlotte, Vermont.

18. June, 1877.

My dear Mr. Bancroft:

I had the pleasure an hour or two ago to open your letter of the 16th, and to learn that you had already had in hand the few ferns of my (Xpina's) collection of 1877 - Before long I shall know what you have called them.

But I was pained to learn of the death of your eldest daughter. And I am now pining over the news from my poor daughter - not dead as far as I know, but to be a suffering invalid till death brings relief. She wrote me several weeks ago of having just come out of a hospital, where she

underwent much severe surgical treatment. The mischief comes largely through the folly of her mother; and it deepens my grief to think that she as well as I must suffer from that folly. She is the wife of a poor Methodist preacher on Long Island and the mother of two boys.

A wall of falsehood bars me from visiting her with the fatherly offices which my heart prompts.

It was not exactly "ill health" which made it seem wise to come home; but I was so worn with hard work that I was too near getting ill. I now find that I left the field now too soon.

But have no fear for me; I shall get recuperated and be eager to return to my field in two months.

I enjoyed most of my journey accordingly. The Jalapa region is charming all winter, very much like June in Vermont. I took in a lot of *Zoosphaera* which had been found in that zone between the base of the tableland and the coast, and of these I got less than 100. To you say I can spend down winter there. Almost constant rains began with June, and as yet the tablelands are brown and thirsty. It was the best time of year for me to come

home to make a distribution.
When I return and towards winter
I shall expect to get you many
ferns not now in good con-
dition.

During my last month I
enjoyed the company of Dr. J. N. Rose
and his companion, Dr. Hough,
also from the National Museum.
Dr. Rose is a good man, mild
and gentle in his manners and
kind of heart.

I have come home to miss
my precious mother still again.
But I have in my home a small
family of good people.

With kindest cheer I remain,

Yours faithfully,
C. L. Pringle.

H

Charlotte, Vermont.

23, March, 1900.

My dear Mr. Sannopert:

Did you hear of my being in Cambridge for four or five days in January and feel that I slighted you in not even calling on you in Hamilton Place?

Dr. Robinson had me there to help him, the college paying my fare, and he kept me constantly at work looking over thirty to forty bundles of Mexican plants to name such as I could recognize at sight.

One evening he took me into Boston to dine with Mr. Emily Williams and met Judge Churchill and Mr. Rand. I had scarcely

an hour at my own disposal, and when Saturday morning came I had to come home. And I had thought I should certainly see you while on the trip - probably spend a night with you in Medford and should probably visit the Arnold Arboretum (which I have near done) and meet Prof. Sargent and Mr. Gaxon! This comes of being poor and a hard-worked drudge.

I came home in October worn down again by toil fever and rheumatism, and by this am scarcely recovered. But I plan to set out on my sixteenth Mexican journey next week. I dread the journey not a little; but know I must work more carefully. I must be on the down-hill side of life now, and shall reach the bottom

soon enough, if I go slow.

Do not suppose I do not anticipate much pleasure from working again under the bright-Mexican skies and gathering that rich flora.

On my autumn trip of only four or five weeks I got no more forms. Here I send you the tickets for those of my spring trip. I expected you to call no. 8174 a *Cyathia*, because it is a fine tree fern.

I have not heard any news of you since last summer. I trust you are as well and happy as usual.

You can address me here, or direct to "Hotel Buena Vista, Mexico City."

Yours faith fully,
C. G. Pringle.
